<<Hacking World of War>>

内容概要

World of Warcraft is your world. You are fearless. You are in command. And when you can command these awesome addons, macros, and customizations, you'll savor the heady brew of victory. From the masters who gave us Atlas and PerfectRaid/Clique, you'll learn how to gain an advantage in combat, write spell-casting macros, work with frames and XML, develop Lua scripts that work with the WoW API, and more. Yeah, they're legal. But don't let that hold you back. Addons, Macros and more. Learn the secrets that unlock hidden treasures! 1. Evaluate your performance in battle with combat statistics. 2. Add instance maps and make notes on the World Map. 3. Rearrange everything onscreen and monitor your vitals with an HUD. 4. Make gold "playing" the Auction House. 5. Have whispers open in their own window like an IM client. 6. Overhaul your interface with pre-packaged compilations. 7. Create two fully functional addons from start to finish.

<<Hacking World of War>>
