<<The clinical document>>

内容概要

All the forms, handouts, and records mental health professionals need to meet documentation requirements. The paperwork required when providing mental health services continues to mount. Keeping records for managed care reimbursement, accreditation agencies, protection in the event of lawsuits, and to help streamline patient care in solo and group practices, inpatient facilities, and hospitals has become increasingly important. This updated and revised Third Edition provides you with a full range of forms, checklists, and clinical records essential for effectively and efficiently managing your practice. From intake to diagnosis and treatment through discharge and outcome assessment, The Clinical Documentation Sourcebook, Third Edition offers sample forms for every stage of the treatment process. Greatly expanded from the second edition, the book now includes twenty-six fully completed forms illustrating the proper way to fill them out, as well as fifty-two ready-to-copy blank forms. The included CD-ROM also provides these forms in Word format so you can easily customize them to suit your practice. With The Clinical Documentation Sourcebook, Third Edition, you'll spend less time on paperwork and more time with clients. * Includes documentation for child, family, and couples counseling *

Updated for HIPAA compliance, as well as to reflect the latest JCAHO and CARF regulations * New focus on clinical outcomes supports the latest innovations in evidence-based practice In its first two editions, The Clinical Documentation Sourcebook became recognized as the most comprehensive and useful practice management resource on the market. This Third Edition provides even more value, offering forms and documents for a broader array of client populations (including for the first time children, families and couples), as well as the full range of resources needed for compliance with the new HIPAA regulations. Redundancy is reduced from the previous editions, while integration of forms across sections is improved. Finally, the new focus on clinical outcomes supports the movement toward evidence-based practice in mental health.
