内容概要

This one-of-a-kind resource brings together all three 'gastrointestinal' organ systems into one textbook of surgical and medical disorders of the GI tract, liver, biliary tract and pancreas. With a strong foundation in morphology, it offers a comprehensive and practical guide to the interpretation of endoscopic biopsies and resection specimens of the alimentary tract and related solid organs. In addition, chapters outline the current clinical approach to management and treatment options, wherever applicable, particularly regarding screening and surveillance recommendations for preneoplastic disorders. You will also find that diseases integrate key pathologic findings with relevant cytologic and genetic information necessary in order to establish an accurate diagnosis. Emphasizes key histologic features necessary to assist in the identification of diseases based upon evaluation of biopsy and resection specimens. Information reflects new understanding of the molecular/phenotypic origin of many disorders. Integrates complementary diagnostic methods such as immunohistochemistry, molecular diagnostics, and cytology with pathologic features. Discusses the up-to-date and controversial aspects of the "hottest" topics in the field. Includes separate chapters on diagnostic cytology of the GI tract, liver, biliary tract and pancreas. Features the expertise of three renowned specialists and more than 50 distinguished contributors. Covers the differential diagnosis of most disorders in an algorithmic manner with abundant high quality color photographs. Organizes disease categories and chapters in a user-friendly manner in order to facilitate quick access to diagnostic features on specific disease entities.

书籍目录

PART ONE Gastrointestinal Tract SECTION I GENERAL PATHOLOGY OF THE GI TRACT
CHAPTER 1 Gastrointestinal Tract Endoscopic and Tissue Processing Techniques Introduction Bowel Preparation Methods for Obtaining Tissue Specimens Pathologic Features of a Healing Biopsy Site Processing of Tissue Specimens for Histologic Analysis Methods for Obtaining Cytology Specimens Screening and Surveillance Guidelines in Gastroenterology CHAPTER 2 Diagnostic Cytology of the GI Tract Introduction Normal Morphology Infections Inflammatory/Reactive/Metaplastic Changes Neoplastic Lesions CHAPTER 3 Infectious Diseases of the GI Tract Introduction Viral Infections of the Gastrointestinal Tract Bacterial Infections of the Gastrointestinal Tract Fungal Infections of the Gastrointestinal Tract Parasitic Infections of the Gastrointestinal Tract Helminthic Infections of the Gastrointestinal Tract CHAPTER 4 Immunodeficiency Disorders of the G/Tract Primary Disorders of Immunodeficiency Graft-Versus-Host Disease Neutropenic Enterocolitis The GI Tract in HIV Infection CHAPTER 5 Systemic Illnesses Involving the GI Tract Introduction Cardiovascular Disorders Dermatologic Disorders Endocrine Disorders Hematologic Disorders Metabolic Disorders Pulmonary Disorders Reproductive Disorders Rheumatologic Disorders Urologic Disorders Miscellaneous Disorders CHAPTER 6 Neuromuscular Disorders of the GI Tract t05 Introduction Neural Network of the Bowel Esophagus Stomach Small and Large IntestinePART TWO Gallbladder, Extrahepatic Biliary Tract, and PancreasPART THREE LiverINDEX
