

<<纳米多孔材料>>

图书基本信息

书名：<<纳米多孔材料>>

13位ISBN编号：9781860942112

10位ISBN编号：1860942113

出版时间：2004-12

出版人：World Scientific Pub Co Inc

作者：Lu, G. Q. (EDT)/ Zhao, X. S. (EDT)

页数：897

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<纳米多孔材料>>

内容概要

Porous materials are of scientific and technological importance because of the presence of voids of controllable dimensions at the atomic, molecular, and nanometer scales, enabling them to discriminate and interact with molecules and clusters. Interestingly the big deal about this class of materials is about the "nothingness" within — the pore space. International Union of Pure and Applied Chemistry (IUPAC) classifies porous materials into three categories — micropores of less than 2 nm in diameter, mesopores between 2 and 50 nm, and macropores of greater than 50 nm. In this book, nanoporous materials are defined as those porous materials with pore diameters less than 100 nm. Over the last decade, there has been an ever increasing interest and research effort in the synthesis, characterization, functionalization, molecular modeling and design of nanoporous materials. The main challenges in research include the fundamental understanding of structure-property relations and tailor-design of nanostructures for specific properties and applications. Research efforts in this field have been driven by the rapid growing emerging applications such as biosensor, drug delivery, gas separation, energy storage and fuel cell technology, nanocatalysis and photonics. These applications offer exciting new opportunities for scientists to develop new strategies and techniques for the synthesis and applications of these materials. This book provides a series of systematic reviews of the recent developments in nanoporous materials. It covers the following topics: (1) synthesis, processing, characterization and property evaluation; (2) functionalization by physical and/or chemical treatments; (3) experimental and computational studies on fundamental properties, such as catalytic effects, transport and adsorption, molecular sieving and biosorption; (4) applications, including photonic devices, catalysis, environmental pollution control, biological molecules separation and isolation, sensors, membranes, hydrogen and energy storage, etc.

书籍目录

Chapter 1 Nanoporous Materials-An Overview
Chapter 2 Advances in Mesoporous Materials Templated by Nonionic Block Copolymers
Chapter 3 Zeolite/Mesoporous Molecular Sieve Composite Materials
Chapter 4 Chromium-Containing Ordered Nanoporous Materials
Chapter 5 Surfactant-Templated Mesostructured Materials: Synthesis and Compositional Control
Chapter 6 Organic Host-Guest Structures in the Solid State
Chapter 7 Nonsurfactant Route to Nanoporous Phenyl-Modified Hybrid Silica Materials
Chapter 8 3D Macroporous Photonic Materials Templated by Self Assembled Colloidal Spheres
Chapter 9 Hydrophobic Microporous Silica Membranes for Gas Separation and Membrane Reactors
Chapter 10 Synthesis and Characterization of Carbon Nanotubes for Hydrogen Storage
Chapter 11 Physical Adsorption Characterization of Ordered and Amorphous Mesoporous Materials
Chapter 12 Molecular Simulation of Adsorption in Porous Materials
Chapter 13 Surface Functionalization of Ordered Nanoporous Silicates
Chapter 14 Surface Alumination of Mesoporous Silicates
Chapter 15 Acidity Measurement of Nanoporous Aluminosilicates - Zeolites and MCM-41
Chapter 16 Nanocatalysts Prepared by the Molecularly Designed Dispersion Process
Chapter 17 Acidity-enhanced Nanoporous Catalytic Materials
Chapter 18 Modified Mesoporous Materials as Acid and Base Catalysts
Chapter 19 Lewis Acid/Base Catalysts Supported on Nanoporous Silica as Environmental Catalysts
Chapter 20 Nanoporous Catalysts for Shape-Selective Synthesis of Specialty Chemicals:A Review of Synthesis of 4,4'-Dialkylbiphenyl
Chapter 21 Catalysis Involving Mesoporous Molecular Sieves
Chapter 22 Adsorption and Transport in Nanoporous Materials
Chapter 23 Adsorption of Organic Molecules in Nanoporous Adsorbents from Aqueous Solution
Chapter 24 Functionalized Nanoporous Adsorbents for Environmental Remediation
Chapter 25 Nanoporous Adsorbents for Air Pollutant Removal
Chapter 26 Bioadsorption and Separation with Nanoporous Materials
Chapter 27 Nanoporous Materials as Supports for Enzyme Immobilization
Chapter 28 A Novel Non-surfactant Route to Nanoporous Materials and its Biological Applications
