

<<Evolutionary Computa>>

图书基本信息

书名：<<Evolutionary Computation in Combinatorial Optimization组合优化的寻优计算/会议录>>

13位ISBN编号：9783540213673

10位ISBN编号：3540213678

出版时间：2004-5-14

出版时间：Springer

作者：Gottlieb, Jens; Raidl, Gnther R.; Raidl, G. Nther R.

页数：240

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<Evolutionary Computa>>

内容概要

This book constitutes the refereed proceedings for the 4th European Conference on Evolutionary Computation in Combinatorial Optimization, EvoCOP 2004, held in Coimbra, Portugal, in April together with EuroGP 2004 and six workshops on evolutionary computing. The 23 revised full papers presented were carefully reviewed and selected from 86 submissions. Among the topics addressed are evolutionary algorithms as well as metaheuristics like memetic algorithms, ant colony optimization, and scatter search; the papers are dealing with representations, operators, search spaces, adaptation, comparison of algorithms, hybridization of different methods, and theory. Among the combinatorial optimization problems studied are graph coloring, network design, cutting, packing, scheduling, timetabling, traveling salesman, vehicle routing, and various other real-world applications.

书籍目录

EvoCOP Contributions
Mutation Multiplicity in a Panmictic Two-Strategy Genetic Algorithm
Solving the Vehicle Routing Problem by Using Cellular Genetic Algorithms
Landscape Regularity and Random Walks for the Job-Shop Scheduling Problem
A Comparison of Adaptive Operator Scheduling Methods on the Traveling Salesman Problem
AntPacking - An Ant Colony Optimization Approach for the One-Dimensional Bin Packing Problem
Scatter Search and Memetic Approaches to the Error Correcting Code Problem
A Hybrid Evolutionary Algorithm for Solving the Register Allocation Problem
Parallel Ant Systems for the Capacitated Vehicle Routing Problem
A Hierarchical Social Metaheuristic for the Max-Cut Problem
On the Structure of Sequential Search: Beyond "No Free Lunch"
Dealing with Solution Diversity in an EA for Multiple Objective Decision Support - A Case Study
A Study into Ant Colony Optimisation, Evolutionary Computation and Constraint Programming on Binary Constraint Satisfaction Problems
Binary Merge Model Representation of the Graph Colouring Problem
Hardness Prediction for the University Course Timetabling Problem
Hybrid Estimation of Distribution Algorithm for Multiobjective Knapsack Problem
On the Use of Path Relinking for the p - Hub Median Problem
Solving a Real-World Glass Cutting Problem
Designing Reliable Communication Networks with a Genetic Algorithm Using a Repair Heuristic
Improving Vehicle Routing Using a Customer Waiting Time Colony
New Benchmark Instances for the QAP and the Experimental Analysis of Algorithms
Improving Edge Recombination through Alternate Inheritance and Greedy Manner
Clustering Nominal and Numerical Data: A New Distance Concept for a Hybrid Genetic Algorithm
On Search Space Symmetry in Partitioning Problems
