

<<Computational Scienc>>

图书基本信息

书名：<<Computational Science and Its Applications - ICCSA 2004计算机科学及其应用>>

13位ISBN编号：9783540220572

10位ISBN编号：3540220577

出版时间：2004-6

出版时间：北京燕山出版社

作者：Lagana, A.; Lagan, Antonio; Gavrilova, Marina L.

页数：1040

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<Computational Scienc>>

内容概要

The four-volume set LNCS 3043-3046 constitutes the refereed proceedings of the International Conference on Computational Science and its Applications, ICCSA 2004, held in Assisi, Italy in May 2004. The four volumes present a total of 460 revised reviewed papers selected from numerous submissions. The proceedings spans the whole range of computational science from foundational issues in computer science and mathematics to advanced applications in virtually all sciences making use of computational techniques. The four volumes give a unique account of recent results in the area

书籍目录

Workshop on Computational Geometry and Applications (CGA 04) Geometric Graphs Realization as Coin
Graphs Disc Covering Problem with Application to Digital Halftoning On Local Transformations in Plane
Geometric Graphs Embedded on Small Grids Reducing the Time Complexity of Minkowski-Sum Based
Similarity Calculations by Using Geometric Inequalities A Practical Algorithm for Approximating Shortest
Weighted Path between a Pair of Points on Polyhedral Surface Plane-Sweep Algorithm of $O(n \log n)$ for the
Inclusion Hierarchy among Circles Shortest Paths for Disc Obstacles Improving the Global Continuity of the
Natural Neighbor Interpolation Combinatorics and Triangulations Approximations for Two
Decomposition-Based Geometric Optimization Problems Computing Largest Empty Slabs
3D-Color-Structure-Code - A New Non-plainness Island Hierarchy Quadratic-Time Linear-Space Algorithms
for Generating Orthogonal Polygons with a Given Number of Vertices Partitioning Orthogonal Polygons by
Extension of All Edges Incident to Reflex Vertices: Lower and Upper Bounds on the Number of Pieces On the
Time Complexity of Rectangular Covering Problems in the Discrete Plane Approximating Smallest Enclosing Balls
Geometry Applied to Designing Spatial Structures Joining Two Worlds A Robust and Fast Algorithm for
Computing Exact and Approximate Shortest Visiting Routes Automated Model Generation System Based on
Freeform Deformation and Genetic Algorithm Speculative Parallelization of a Randomized Incremental Convex
Hull Algorithm The Employment of Regular Triangulation for Constrained Delaunay Triangulation The
Anchored Voronoi Diagram Implementation of the Voronoi-Delaunay Method for Analysis of Intermolecular
Voids Approximation of the Boat-Sail Voronoi Diagram and Its ApplicationTrack on Computational
GeometryTrack on Adaptive AlgorithmsTrack on Biology, Biochemistry, BioinformaticsTrack on Cluster
ComputingTrack on Computational MedicineTrack on Computational MethodsTrack on Computational
Science EducationTrack on Computer Modeling and SimulationTrack on Mobile Computing Systems Author
