<< 2005 / STACS 2005>>

The LNCS series reports state-of-the-art results in computer science research, development, and education, at a high level and in both printed and electronic form. Enjoying tight cooperation with the R&D community, with numerous individuals, as well as with prestigious organizations and Societies, LNCS has grown into the most comprehensive computer science research forum available. The scope of LNCS, including its sub series LNAI, spans the whole range of computer science and information technology including interdisciplinary topics in a variety of application fields. The type of material published traditionally includes - Proceedings published in time for the respective conference - Post-proceedings consisting of thoroughly revised final full papers -research monographs which may be based on outstanding PhD work, research projects, technical reports, etc.

Invited Talks   Automorphisms of Finite Rings and Applications to Complexity of   Problems   Algebraic Generating Functions in Enumerative Combinatorics and   Context-Free Languages   Algorithmics in Exponential TimeSession 1A   Worst-Case and Average-Case Approximations by Simple Randomized Search Heuristics   Sampling Sub-problems of Heterogeneous Max-cut Problems and Approximation Algorithms   Truthful Approximation Mechanisms for Scheduling Selfish Related MachinesSession 1B   Counting in the Two Variable Guarded Logic with Transitivity   The Variable Hierarchy of the #-Calculus Is Strict   The Core of a Countably Categorical StructureSession 2A   How Common Can Be Universality for Cellular Automata?   Cellular Automata: Real-Time Equivalence Between One-Dimensional NeighborhoodsSession 2B   On the Decidability of Temporal Properties of Probabilistic Pushdown Automata   Deciding Properties of Contract-Signing Protocols Session 3A   Polylog-Time Reductions Decrease Dot-Depth   On the Computational Complexity of the Forcing Chromatic Number   More Efficient Queries in PCPs for NP and Improved Approximation Hardness of Maximum CSPSession 3B   Three Optimal Algorithms for Balls of Three Colors   Cost Sharing and Strategyproof Mechanisms for Set Cover Games   On Weighted Balls-into-Bins Games Session 4A   Computing Minimal Multi-homogeneous Bdzout Numbers Is HardSession 4BSession 5ASession 5BSession 6ASession 6BSession 7ASession 8BSession 8ASession 8BSession 9ASession 9BSession 10ASession 10B
