<<Biological and Medic>>

LNBI is devoted to the publication of state-of-the-art research results in bio-informatics and computational biology, at a high level and in both printedand electronic versions - making use of the well-established LNCS publicationmachinery. As with the LNCS mother series, refereed proceedings and post-proceedings are at the core of LNBI, however, similar to the color cover sub-lines in LNCS, tutorials and state-of-the-art surveys are also invited for LNBI.   Among the topics covered are: Genomics   Molecular sequence analysis   Recognition of genes and regulatory elements   Molecular evolution   Protein structure   Gene expression   Gene networks   Combinatorial libraries and drug design   Computational proteomics
