书籍目录

Preface Acknowledgements Dedication Part 1: Processes of Metabolism and Nutrition

1. Overview of Metabolism
Useful definitions Basic principles of bioenergetics
2. Carbohydrate and Energy Metabolism
Glycolysis and its regulation Central role of acetyl CoA Tricarboxylic acid cycle (TCA Cycle) Generation of ATP Glycogen metabolism Role of 2,3-bisphosphoglycerate Fructose, galactose, ethanol, and sorbitol
3. Production of NADPH
Pentose phosphate pathway and the pyruvate malate cycle The roles of NADPH
4. Lipid Metabolism
Lipid biosynthesis Lipid breakdown Cholesterol metabolism Transport of lipids The ketone bodies
5. Protein Metabolism
Biosynthesis of the non-essential amino acids Protein breakdown and the disposal of nitrogen Gluconeogenesis and the metabolism of amino acids to glucose and fat Amino acid metabolism in individual tissues
6. Purines, Pyrimidines, and Haem
One-carbon pool Purine metabolism Pyrimidine metabolism Haem metabolism
7. Metabolic Integration
Glucose homeostasis
8. Nutrition
Basic principles of human nutrition Energy balance Protein nutrition Vitamins Minerals

Part 2: Clinical Assessment

9. Taking a History
Things to remember when taking a history Common presenting complaints
10. Examination of the Patient
General inspection Limbs Head and neck Thorax The abdomen
11. Further Investigations
Routine investigations Assessment of nutritional status

Part 3: Basic Pathology

12. Important Metabolic Disorders
Disorders of glucose and energy metabolism Disorders of lipid metabolism Disorders of amino acid metabolism Disorders of purine pyrimidine metabolism Disorders of haem metabolism
13. Important Nutritional Disorders
Disorders of protein nutrition and energy balance The fat-soluble vitamins: deficiency and excess The water-soluble vitamins: effects of deficiency Disorders of mineral nutrition

Part 4: Self-assessment

Multiple-choice Questions Short-answer Questions Essay Questions MCQ Answers SAQ Answers Index
