

图书基本信息

书名：<<泛函不等式,马尔可夫半群与谱理论>>

13位ISBN编号：9787030144157

10位ISBN编号：7030144155

出版时间：2005-1

出版时间：科学出版社

作者：王凤雨

页数：392

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

内容概要

本书的主要内容涉及概率论、泛函分析、微分几何和统计物理等多个学科, 较系统的介绍了近十年有关泛函不等式及其近十年来的有关泛函不等式及其应用的主要研究成果和研究方法。

其中的一些成果和研究思想被国际同行专家大量引用, 引发了一系列的后续工作。

以泛函不等式为主要工具研究马氏半群及其生成元的分析与概率性质。

特别的, 使用弱不等式刻画马氏半群的各种收敛速度; 使用超不等式刻画半群一致可积性以及生成元的本征谱和高阶特征值的估计; 引入一般型可加性的不等式, 刻画马氏半群在不同意义下的指数式收敛以及概论距离的上界估计。

作者简介

王风雨, 博士, 1966年12月生于安徽省嘉山县。

北京师范大学教授, 长江学者特聘教授, 博士生导师, 国家杰出青年科学基金获得者。

曾应邀访问英国Warwick大学, 还应邀访问过美国、法国、德国、俄罗斯、日本、新加坡、意大利和台湾等国家和地区的20余所大学和研究所, 并多次在国际学术会议上作邀请报告。

目前, 担任中国概率统计学会常务理事, 美国《数学评论》和德国《数学文摘》评论员, 《应用概率统计》等杂志的编委。

曾经作为洪堡学者在德国Bidefeld大学工作。

曾经获得钟嘉庆数学奖, 教育部科技进步奖一等奖, 国家自然科学基金三等奖和教育部首届高校青年教师奖, 霍英东青年教师奖研究类一等奖。

获得北京市五四青年奖章, 入选首批新世纪百千万工程国家级人才计划, 承担国家重点基础研究发展规划“973”项目。

研究方向涉及概率论、微分几何、统计物理和泛函分析等多个学科领域, 已发表论文近80篇, 出版专著一部。

书籍目录

Chapter 0 Preliminaries

0.1 Dirichlet forms, sub-Markov semigroups and generators

0.2 Dirichlet forms and Markov processes

0.3 Spectral theory

0.4 Riemannian geometry

Chapter 1 Poincaré; Inequality and Spectral Gap

1.1 A general result and examples

1.2 Concentration of measures

1.3 Poincaré; inequalities for jump processes

1.3.1 The bounded jump case

1.3.2 The unbounded jump case

1.3.3 A criterion for birth-death processes

1.4 Poincaré; inequality for diffusion processes

1.4.1 The one-dimensional case

1.4.2 Spectral gap for diffusion processes on \mathbb{R}^d

1.4.3 Existence of the spectral gap on manifolds and application to nonsymmetric elliptic operators

1.5 Notes

Chapter 2 Diffusion Processes on Manifolds and Applications

2.1 Kendall-Cranston's coupling

2.2 Estimates of the first (closed and Neumann) eigenvalue

2.3 Estimates of the first two Dirichlet eigenvalues

2.3.1 Estimates of the first Dirichlet eigenvalue

2.3.2 Estimates of the second Dirichlet eigenvalue and the spectral gap

2.4 Gradient estimates of diffusion semigroups

2.4.1 Gradient estimates of the closed and Neumann semigroups

2.4.2 Gradient estimates of Dirichlet semigroups

2.5 Harnack and isoperimetric inequalities using gradient estimates

2.5.1 Gradient estimates and the dimension-free Harnack inequality

2.5.2 The first eigenvalue and isoperimetric constants

2.6 Liouville theorems and couplings on manifolds

2.6.1 Liouville theorem using the Brownian radial process

2.6.2 Liouville theorem using the derivative formula

2.6.3 Liouville theorem using the conformal change of metric

2.6.4 Applications to harmonic maps and coupling

Harmonic maps

2.7 Notes

Chapter 3 Functional Inequalities and Essential Spectrum

3.1 Essential spectrum on Hilbert spaces

3.1.1 Functional inequalities

3.1.2 Application to nonsymmetric semigroups

3.1.3 Asymptotic kernels for compact operators

3.1.4 Compact Markov operators without kernels

3.2 Applications to coercive closed forms

3.3 Super Poincaré; inequalities

3.3.1 The F-Sobolev inequality

3.3.2 Estimates of semigroups

3.3.3 Estimates of high order eigenvalues

3.3.4 Concentration of measures for super Poincaré; inequalities

3.4 Criteria for super Poincaré; inequalities

3.4.1 A localization method

3.4.2 Super Poincaré; inequalities for jump processes

3.4.3 Estimates of β for diffusion processes

3.4.4 Some examples for estimates of high order eigenvalues

3.4.5 Some criteria for diffusion processes

3.5 Notes

Chapter 4 Weak Poincaré; Inequalities and Convergence of Semigroups

4.1 General results

4.2 Concentration of measures

4.3 Criteria of weak Poincaré; inequalities

4.4 Isoperimetric inequalities

4.4.1 Diffusion processes on manifolds

4.4.2 Jump processes

4.5 Notes

Chapter 5 Log-Sobolev Inequalities and Semigroup Properties

5.2 Spectral gap for hyperbounded operators

5.3 Concentration of measures for log-Sobolev inequalities

5.4 Logarithmic Sobolev inequalities for jump processes

5.4.1 Isoperimetric inequalities

5.4.2 Criteria for birth-death processes

5.5 Logarithmic Sobolev inequalities for one-dimensional diffusion processes

5.6 Estimates of the log-Sobolev constant on manifolds

5.6.1 Equivalent statements for the curvature condition

5.6.2 Estimates of $\alpha(V)$ using Bakry-Emery's criterion

5.6.3 Estimates of $\alpha(V)$ using Harnack inequality

5.6.4 Estimates of $\alpha(V)$ using coupling

5.7 Criteria of hypercontractivity, superboundedness and ultraboundedness

5.7.1 Some criteria

5.7.2 Ultraboundedness by perturbations

5.7.3 Isoperimetric inequalities

5.7.4 Some examples

5.8 Strong ergodicity and log-Sobolev inequality

5.9 Notes

Chapter 6 Interpolations of Poincaré; and Log-Sobolev Inequalities

6.1 Some properties of (6.0.3)

6.2 Some criteria of (6.0.3)

6.3 Transportation cost inequalities

6.3.1 Otto-Villanis coupling

6.3.2 Transportation cost inequalities

6.3.3 Some results on (I下标)

6.4 Notes

Chapter 7 Some Infinite Dimensional Models

7.1 The (weighted) Poisson spaces

7.1.1 Weak Poincaré; inequalities for second quantization Dirichlet forms

7.1.2 A class of jump processes on configuration spaces

7.1.3 Functional inequalities for ϵ ; 上标 下标

7.2 Analysis on path spaces over Riemannian manifolds

7.2.1 Weak Poincaré; inequality on finite-time interval path spaces

7.2.2 Weak Poincaré; inequality on infinite-time interval path spaces

7.2.3 Transportation cost inequality on path spaces with L^2 -distance

7.2.4 Transportation cost inequality on path spaces with the intrinsic distance

7.3 Functional and Harnack inequalities for generalized Mehler semigroups

7.3.1 Some general results

7.3.2 Some examples

7.3.3 A generalized Mehler semigroup associated with the Dirichlet heat semigroup

7.4 Notes

Bibliography

Index

编辑推荐

概率论与函数研究领域的研究生、教师和科研工作者。
