

<<偏微分方程最优控制的自适应有限元方>>

图书基本信息

书名：<<偏微分方程最优控制的自适应有限元方法>>

13位ISBN编号：9787030222565

10位ISBN编号：7030222563

出版时间：2008-1

出版时间：科学出版社

作者：Wenbin Liu 等著

页数：199

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## <<偏微分方程最优控制的自适应有限元方>>

### 内容概要

The main idea used in error analysis is to first combine convex analysis and interpolation error estimations of suitable interpolators, which much depend on the structure of the control constraints, in order to derive error estimates for the control via the variational inequalities in the optimality conditions, and then to apply the standard techniques for deriving error estimates for the state equations.

## 书籍目录

Chapter 1 Introduction 1.1 Examples of optimal control for elliptic systems 1.2 Examples of optimal control for evolution equations 1.3 Examples of optimal control for flow 1.4 Shape optimal control  
Chapter 2 Existence and Optimality Conditions of Optimal Control 2.1 Existence of optimal control 2.2 Optimality conditions of optimal control  
Chapter 3 Finite Element Approximation of Optimal Control 3.1 Finite element schemes for elliptic optimal control 3.2 Mixed finite element schemes for elliptic optimal control 3.3 Optimal control governed by Stokes equations 3.4 Finite element method for boundary control  
Chapter 4 A Priori Error Estimates for Optimal Control (I) 4.1 A priori error estimates for distributed elliptic control 4.2 A priori error estimates for elliptic boundary control 4.3 Superconvergence analysis for distributed elliptic control 4.4 Further developments on superconvergence  
Chapter 5 A Priori Error Estimates for Optimal Control (II) 5.1 A priori error estimates of mixed FEM for elliptic control 5.2 Superconvergence of mixed FEM for elliptic control 5.3 A priori error estimates for Stokes control 5.4 Superconvergence for Stokes control  
Chapter 6 Adaptivity Finite Element Method for Optimal Control 6.1 Adaptive finite element method for elliptic equations 6.2 Adaptive finite element method for optimal control  
Chapter 7 A Posteriori Error Estimates for Optimal Control 7.1 A posteriori error estimates for distributed control 7.2 A posteriori error estimates with lower and upper bounds 7.3 Sharp a posteriori error estimates for constraints of obstacle type 7.4 A posteriori error estimates in L2-norm 7.5 A posteriori error estimates for nonlinear control 7.6 A posteriori error estimates for boundary control  
Chapter 8 Numerical Computations of Optimal Control 8.1 Numerical solutions of optimal control 8.2 A preconditioned projection algorithm 8.3 Numerical Experiments 8.4 Appendix-L2-Projectors to some closed convex subsets  
Chapter 9 Recovery Based a Posteriori Error 9.1 Equivalence of a posteriori error estimations of recovery type 9.2 Asymptotical exactness of a posteriori error estimators of recovery type  
Chapter 10 Adaptive mixed finite element method for optimal control 10.1 A posteriori error estimates for elliptic control 10.2 A posteriori error estimates for stokes control  
Bibliography
