

<<复分析I>>

图书基本信息

书名：<<复分析I>>

13位ISBN编号：9787030234919

10位ISBN编号：703023491X

出版时间：2009-1

出版时间：科学出版社

作者：A.A.Gonchar

页数：261

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## 前言

要使我国的数学事业更好地发展起来,需要数学家淡泊名利并付出更艰苦地努力。另一方面,我们也要从客观上为数学家创造更有利的发展数学事业的外部环境,这主要是加强对数学事业的支持与投资力度,使数学家有较好的工作与生活条件,其中也包括改善与加强数学的出版工作。

从出版方面来讲,除了较好较快地出版我们自己的成果外,引进国外的先进出版物无疑也是十分重要与必不可少的。

从数学来说,施普林格(Springer)出版社至今仍然是世界上最具权威的出版社。

科学出版社影印一批他们出版的好的新书,使我国广大数学家能以较低的价格购买,特别是在边远地区工作的数学家能普遍见到这些书,无疑是对推动我国数学的科研与教学十分有益的事。

这次科学出版社购买了版权,一次影印了23本施普林格出版社出版的数学书,就是一件好事,也是值得继续做下去的事情。

大体上分一下,这23本书中,包括基础数学书5本,应用数学书6本与计算数学书12本,其中有些书也具有交叉性质。

这些书都是很新的,2000年以后出版的占绝大部分,共计16本,其余的也是1990年以后出版的。

这些书可以使读者较快地了解数学某方面的前沿,例如基础数学中的数论、代数与拓扑三本,都是由该领域大数学家编著的“数学百科全书”的分册。

对从事这方面研究的数学家了解该领域的前沿与全貌很有帮助。

按照学科的特点,基础数学类的书以“经典”为主,应用和计算数学类的书以“前沿”为主。

这些书的作者多数是国际知名的大数学家,例如《拓扑学》一书的作者诺维科夫是俄罗斯科学院的院士,曾获“菲尔兹奖”和“沃尔夫数学奖”。

这些大数学家的著作无疑将会对我国的科研人员起到非常好的指导作用。

当然,23本书只能涵盖数学的一部分,所以,这项工作还应该继续做下去。

更进一步,有些读者面较广的好书还应该翻译成中文出版,使之有更大的读者群。

总之,我对科学出版社影印施普林格出版社的部分数学著作这一举措表示热烈的支持,并盼望这一工作取得更大的成绩。

## 内容概要

The first part of the volume contains a comprehensive description of the theory of entire and meromorphic functions of one complex variable and its applications. It includes the fundamental notions, methods and results on the growth of entire functions and the distribution of their zeros, the Rolf Nevanlinna theory of distribution of values of meromorphic functions including the inverse problem, the theory of completely regular growth, the concept of limit sets for entire and subharmonic functions. The authors describe the applications to the interpolation by entire functions, to entire and meromorphic solutions of ordinary differential equations, to the Riemann boundary problem with an infinite index and to the arithmetic of the convolution semigroup of probability distributions. Polyanalytic functions form one of the most natural generalizations of analytic functions and are described in Part II. They emerged for the first time in plane elasticity theory where they found important applications (due to Kolosof, Muskhelishvili etc.). This contribution contains a detailed review of recent investigations concerning the function-theoretical peculiarities of polyanalytic functions (boundary behaviour, value distributions, degeneration, uniqueness etc.). Polyanalytic functions have many points of contact with such fields of analysis as polyharmonic functions, Nevanlinna Theory, meromorphic curves, cluster set theory, functions of several complex variables etc.

## 书籍目录

Contents Introduction Chapter I. General Theorems on the Asymptotic Behavior of Entire and Meromorphic Functions (A. A. Gol'dberg, B. Ya. Levin, V. Ostrovskii) § 1. Characteristics of Asymptotic Behavior § 2. Relation Between Growth and Decrease § 3. Relation Between the Indicator of  $sD$  Entire Function and Singularities of Its Borel Transform § 4. Wiman-vallin Theory Chapter 2. The Connection Between the Growth of an Entire Function and the Distribution of Its Zeros (B. Ya. Levin, V. Ostrovskii) § 1. Classical Results § 2. Entire Functions of Completely Regular Growth § 3. Entire Functions of Exponential Type with Restrictions on the Real Axis. § 4. Exceptional Sets § 5. Two-Term Asymptotics A. A. Gol'dberg, B. Ya. Levin, V. Ostrovskii § 6. Approximation of a Subharmonic Function by the Logarithm of the Modulus of an Entire Function § 7. The Relation Between the Growth and Distribution of Zeros and Fourier Coefficients Chapter 3. Limit Sets of Entire and Subharmonic Functions (V. S. Azarin). § 1. Principal Notations and Theorems § 2. Limit Sets and Their Relation to Other Characteristics § 3. Applications of Limit Sets § 4. Limit Sets and Dynamical Systems Chapter 4. Interpolation by Entire Functions (B. Ya. Levin, V. A. Tkachenko). § 1. Newton's Interpolation Series § 2. Abel-Conte-Haroff Interpolation Series § 3. Gelfond's Moments Problem § 4. Lagrange's Interpolation Series § 5. Interpolation Techniques Based on Solving the  $\bar{L}$  Problem § 6. The Lagrange Interpolation Process in Some Normed Spaces Chapter 5. Distribution of Values of Meromorphic Functions (A. A. Gol'dberg) § 1. Main Nevanlinna Theorems. Nevanlinna Deficient Values and Deficient Functions § 2. Inverse Problems of Value Distribution Theory § 3. The Ahlfors Theory § 4. Valiron Deficiencies § 5. Exceptional Values in the Sense of Petrenko § 6. Asymptotic Curves and Asymptotic Values. § 7. Julia and Borel Directions Filling Disks § 8. Closeness of  $a$ -Points § 9. Value Distribution of Derivatives of Meromorphic Functions § 10. Value Distribution with Respect to Arguments § 11. Value Distribution of Special Classes of Meromorphic Functions § 12. Entire Curves Chapter 6. Entire and Meromorphic Solutions of Ordinary Differential Equations (A. E. Eremenko) § 1. Nonlinear ADEs with Meromorphic Solutions § 2. Linear Differential Equations Chapter 7. Some Applications of the Theory of Entire Functions (I. V. Ostrovskii) § 1. Riemann's  $B$  Boundary Problem with Infinite Index § 2. The Arithmetic of Probability Distributions § 3. Entire Characteristic and Ridge Functions References
