

<<傅里叶分析及其应用>>

图书基本信息

书名：<<傅里叶分析及其应用>>

13位ISBN编号：9787030313775

10位ISBN编号：7030313771

出版时间：2011-6

出版时间：科学

作者：弗雷特布拉德

页数：269

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<傅里叶分析及其应用>>

内容概要

A carefully prepared account of the basic ideas in Fourier analysis and its applications to the study of partial differential equations. The author succeeds to make his exposition accessible to readers with a limited background, for example, those not acquainted with the Lebesgue integral. Readers should be familiar with calculus, linear algebra, and complex numbers. At the same time, the author has managed to include discussions of more advanced topics such as the Gibbs phenomenon, distributions, Sturm-Liouville theory, Cesaro summability and multi-dimensional Fourier analysis, topics which one usually does not find in books at this level. A variety of worked examples and exercises will help the readers to apply their newly acquired knowledge.

<<傅里叶分析及其应用>>

作者简介

作者：（瑞典）弗雷特布拉德（Anders Vretblad）

<<傅里叶分析及其应用>>

书籍目录

- preface
- 1 introduction
 - 1.1 the classical partial differential equations
 - 1.2 well-posed problems
 - 1.3 the one-dimensional wave equation
 - 1.4 fourier's method
- 2 preparations
 - 2.1 complex exponentials
 - 2.2 complex-valued functions of a real variable
 - 2.3 cesaro summation of series
 - 2.4 positive summation kernels
 - 2.5 the riemann-lebesgue lemma
 - 2.6 *some simple distributions
 - 2.7 *computing with
- 3 laplace and z transforms
 - 3.1 the laplace transform
 - 3.2 operations
 - 3.3 applications to differential equations
 - 3.4 convolution
 - 3.5 *laplace transforms of distributions
 - 3.6 the z transform
 - 3.7 applications in control theory
- summary of chapter 3
- 4 fourier series
 - 4.1 definitions
 - 4.2 dirichlet's and fejer's kernels; uniqueness
 - 4.3 differentiable functions
 - 4.4 pointwise convergence
 - 4.5 formulae for other periods
 - 4.6 some worked examples
 - 4.7 the gibbs phenomenon
 - 4.8 *fourier series for distributions
- summary of chapter 4
- 5 l_2 theory
 - 5.1 linear spaces over the complex numbers
 - 5.2 orthogonal projections
 - 5.3 some examples
 - 5.4 the fourier system is complete
 - 5.5 legendre polynomials
 - 5.6 other classical orthogonal polynomials
- summary of chapter 5
- 6 separation of variables
 - 6.1 the solution of fourier's problem
 - 6.2 variations on fourier's theme
 - 6.3 the dirichlet problem in the unit disk

<<傅里叶分析及其应用>>

6.4 sturm-liouville problems
6.5 some singular sturm-liouville problems
summary of chapter 6
7 fourier transforms
7.1 introduction
7.2 definition of the fourier transform
7.3 properties
7.4 the inversion theorem.
7.5 the convolution theorem
7.6 plancherel's formula
7.7 application i
7.8 application 2
7.9 application 3: the sampling theorem
7.10 *connection with the laplace transform
7.11 *distributions and fourier transforms
summary of chapter 7
8 distributions
8.1 history
8.2 fuzzy points - test functions
8.3 distributions
8.4 properties
8.5 fourier transformation
8.6 convolution
8.7 periodic distributions and fourier series
8.8 fundamental solutions
8.9 back to the starting point
summary of chapter 8
9 multi-dimensional fourier analysis
9.1 rearranging series
9.2 double series
9.3 multi-dimensional fourier series
9.4 multi-dimensional fourier transforms
appendices
a the ubiquitous convolution
b the discrete fourier transform
c formulae
c.1 laplace transforms
c.2 z transforms
c.3 fourier series
c.4 fourier transforms
c.5 orthogonal polynomials
d answers to selected exercises
e literature
index
