

<<不完全信息系统及粗糙集理论>>

图书基本信息

书名：<<不完全信息系统及粗糙集理论>>

13位ISBN编号：9787030324764

10位ISBN编号：7030324765

出版时间：2011-11

出版时间：科学出版社

作者：本社 编

页数：232

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<不完全信息系统及粗糙集理论>>

内容概要

Incomplete Information System and Rough Set Theory : Models And Attribute Re-ductions provides evidence of present growth in the rough set approach to the incomplete information system. The topics discussed in this book have received significant attentions in recent years because researchers can apply new tools for problem solving. This book reflects a number of approaches those were either directly or indirectly begun by the seminal work on rough set by Zdzislaw Pawlak. It is well-know that the knowledge representation system or the so-called information system plays a crucial role in Pawlak's rough set theory. Evidence of the growth of various rough set-based research streams can be found in the rough set databasel. However , in many practical applications , since the difficulties of acquisitions of knowledge , incomplete instead of the complete information systems can be seen everywhere. Therefore , how to employ the rough set approach to deal with the incomplete information systems is very important to the development of the rough set theory.

书籍目录

Part I Indiscernibility Relation Based Rough Sets Chapter 1 indiscernibility Relation, Rough Sets and Information System

1.1 Pawlak's Rough Approximation

1.1.1 Rough Set

1.1.2 Uncertainty Measurements and Knowledge Granulation

1.1.3 Knowledge Reductions

1.1.4 Knowledge Dependency

1.2 Variable Precision Rough Set

1.2.1 Inclusion Error and Variable Precision Rough Set

1.2.2 Several Reducts in Variable Precision Rough Set

1.3 Multigranulation Rough Set

1.3.1 Optimistic Multigranulation Rough Set

1.3.2 Pessimistic Multigranulation Rough Set

1.3.3 Multigranulation Rough Memberships

1.4 Hierarchical Structures on Multigranulation Spaces

1.4.1 Definitions of Three Hierarchical Structures

1.4.2 Relationships Between Hierarchical Structures and Multigranulation Rough Sets

1.5 Information System

1.5.1 Information System and Rough Set

1.5.2 Rough Sets in Multiple-source Information Systems

1.5.3 Several Reducts in Decision System

1.6 Conclusions

References

Part II Incomplete Information Systems and Rough Sets Chapter 2 Expansions of Rough Sets in Incomplete Information Systems.

2.1 Tolerance Relation Based Rough Set Approach

2.1.1 Tolerance Relation and Its Reducts

2.1.2 Tolerance Relation Based Rough Set and Generalized Decision Reduct

2.2 Valued Tolerance Relation Based Rough Set Approach

2.2.1 Valued Tolerance Relation

2.2.2 Valued Tolerance Relation Based Fuzzy Rough Set

2.3 Maximal Consistent Block Based Rough Set Approach

2.3.1 Maximal Consistent Block and Its Reducts

2.3.2 Maximal Consistent Block Based Rough Set and Approximate Distribution Reducts

2.4 Descriptor Based Rough Set

2.4.1 Descriptor and Reduct Descriptor

2.4.2 Descriptor Based Rough Set and Generalized Decision Reduct of Descriptor

2.5 Similarity Relation Based Rough Set Approach

2.5.1 Similarity Relation and Similarity Based Rough Set

2.5.2 Approximate Distribution Reducts in Similarity Relation Based Rough Set

2.6 Difference Relation Based Rough Set Approach

2.6.1 Difference Relation and Its Reducts

2.6.2 Rough Set Based on Difference Relation

2.6.3 Approximate Distribution Reducts in Difference Relation Based Rough Set

2.7 Limited Tolerance Relation Based Rough Set Approach

2.7.1 Limited Tolerance Relation

2.7.2 Limited Tolerance Relation Based Rough Set

2.8 Characteristic Relation Based Rough Set Approach

2.8.1 Characteristic Relation and Characteristic Relation Based Rough Set

2.8.2 Approximate Distribution Reducts in Characteristic Relation Based Rough Set

2.9 Conclusions

References

Chapter 3 Neighborhood System and Rough Set in Incomplete Information System

3.1 Neighborhood System

3.1.1 From Granular Computing to Neighborhood System

3.1.2 Binary Neighborhood System

3.1.3 Covering and Neighborhood System

3.1.4 Fuzzy Neighborhood System

3.1.5 Neighborhood System and Topological Space

3.1.6 Knowledge Operation in Neighborhood System

3.2 Neighborhood System and Rough Approximations

3.2.1 Neighborhood System Based Rough Sets

3.2.2 Relationship Between Neighborhood System Based Rough Set and VPRS

3.2.3 Neighborhood System Based Rough Approximations in Incomplete Information System

3.3 Reducts Neighborhood Systems

3.3.1 Reducts Neighborhood Systems in Incomplete Information System

3.3.2 Neighborhood Systems Based Approximate Distribution Reducts

3.4 Conclusions

References

Part III Dominance-based Rough Sets and Incomplete Information Systems Chapter 4 Dominance-based Rough Sets in " , " Incomplete Information System Chapter 5 Dominance-based Rough Sets in " ? " Incomplete Information System Part IV Incomplete Information Systems and Multigranulation Rough Sets Chapter 6 Multigranulation Rough Sets in Incomplete Information System

章节摘录

插图：Abstract Pawlak's rough set model, was firstly constructed on the basis of an indiscernibility relation. Such an indiscernibility relation is an intersection of some equivalence relations in knowledge base and then it is also an equivalence relation. This chapter introduced the basic concepts of Pawlak's rough set, Ziarko's variable precision rough set and Qian's multigranulation rough sets. These models were all proposed on the basis of indiscernibility relation. Variable precision rough set generalizes classical rough approximation by introducing a threshold α . Such α value represents a bound on the conditional probability of an equivalence class, which are classified into the target concept. Multigranulation rough set uses a family of the indiscernibility relation instead of a single one to construct rough approximation. In multigranulation rough set approach, the optimistic and pessimistic multigranulation rough sets are two basic models.
