

<<疼痛的分子机理>>

图书基本信息

书名：<<疼痛的分子机理>>

13位ISBN编号：9787040189544

10位ISBN编号：7040189542

出版时间：2007-10

出版范围：高等教育

作者：卓敏

页数：492

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<疼痛的分子机理>>

内容概要

《疼痛的分子机理（英文版）》在介绍疼痛基本机理最新发现的同时讲授疼痛的基本理论，是以最新进展为基础的教材，并注重介绍应用疼痛模型研究神经科学问题和神经科学研究的新成果在疼痛研究中的应用。

每章均由在领域内有突出贡献的专家撰写。

该书可供生理学、解剖学、医学、护理学等专业的高年级大学生、研究生、科研人员以及临床疼痛科的医生使用。

<<疼痛的分子机理>>

书籍目录

Major Contributors
 Preface
 The Guide to Use This Book
 Part Genes , Neurons and Neurotransmission
 Chapter 1 Genes and Neurons
 Chapter 2 Synapses : Coupling of Presynaptic Voltage-gated Ca²⁺ Channels to Vesicular Release of Neurotransmitter
 Chapter 3 Synaptic Vesicle Cycle at Nerve Terminals
 Part Glutamate , Excitatory Transmission and Pain
 Chapter 4 Postsynaptic Excitatory Transmission
 Chapter 5 Kainate Receptors
 Chapter 6 Excitatory Amino Acid Neurotransmitter Regulation
 Chapter 7 Spinal Glutamate Receptors
 Chapter 8 Glutamate Kainate Receptor in Pain Transmission and Modulation
 Part Neuropeptides , ATP , Retrograde Messengers and Opioids
 Chapter 9 Neuropeptides
 Chapter 10 ATP and Its Receptors in Pain
 Chapter 11 Opioid Receptors
 Chapter 12 Retrograde Messengers
 Part Inhibitory Transmission and Plasticity
 Chapter 13 Inhibitory Transmission
 Chapter 14 Plasticity of Inhibition ; GABA / glycine Systems
 Part Postsynaptic Signaling and Gene Regulation
 Chapter 15 Protein Kinases and Phosphatases
 Chapter 16 Activity-dependent Gene Regulation : How Do Synapses Talk to the Nucleus and Fine-tune Neuronal Outputs
 Chapter 17 Second Messenger Pathways in Pain
 Chapter 18 Genetic Approaches for the Study of Pain
 Part Peripheral Nociceptor , Amygdala and Fear
 Chapter 19 Peripheral Nociceptors
 Chapter 20 Amygdala-Pain Processing and Pain Modulation
 Chapter 21 Fear Learning
 Part Spinal Plasticity , Reorganization and Chronic Pain
 Chapter 22 Silent Glutamatergic Synapses and Long-term Facilitation in Spinal Dorsal Horn Neurons
 Chapter 24 Spinal Microglia in Neuropathic Pain
 Plasticity
 Part Cortical Plasticity , Reorganization and Amputation
 Chapter 25 ACC Plasticity
 Chapter 26 Reorganization of the Sensorimotor System after Injury
 Part Endogenous Analgesia and Other Form of Analgesia
 Chapter 27 Endogenous Biphasic Modulation
 Chapter 28 Paradoxical Analgesic and Hyperalgesic Effects of Stress
 Chapter 29 Acupuncture Analgesia
 Chapter 30 Mechanisms of Opioid Tolerance
 Part Models for Studying Pain and Searching for Pain Killers
 Chapter 31 Models in Pain Research
 Chapter 32 Models for Studying Pain and Searching for Pain Killers in Vitro
 Electrophysiological Studies of Pain
 Chapter 33 Whole-cell Patch-clamp Recording in Vivo
 Chapter 34 Basic Mechanisms of Clinically Used Drugs
 Selected References
 Appendix Units in Pain Research
 Appendix Useful Websites for the Study of Pain
 Appendix List of Scientific Journals Publishing Studies in Pain
 Appendix Fundamental and Innovative Contribution to Understanding of Basic Mechanism of Pain , Analgesia and Persistent Pain
