

<<机械英语>>

图书基本信息

书名：<<机械英语>>

13位ISBN编号：9787040266955

10位ISBN编号：7040266954

出版时间：2010-4

出版时间：高等教育出版社

作者：邹晶明，欧阳美和 编

页数：220

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<机械英语>>

前言

近年来,我国的高等职业教育在国家政策的大力扶持下,得到了长足的发展,人才培养模式更加符合我国现阶段经济发展的需求,课程设置更加重视实用知识的传授和实践能力的培养。教育主管部门与时俱进,对高职高专的英语教学适时做出调整,提出“实用为主,工学结合”的指导原则,在日常的英语教学中加大了专业英语教学的比重,凸显了专业英语教学的重要性。

《机械英语》正是为了满足广大高职高专院校开设专业英语课程的要求,遵循教育部高等教育司颁发的《高职高专教育英语课程教学基本要求》的指导原则而进行编写的。

为了做好这项工作,我们除了遵循教育部规定的一般原则外,还特别注意到了如下几点: 一、专业特色明显。

本教材所选的材料与一般的机械科普读物不同,不是对于专业知识的简单罗列,而是对专业知识的梳理介绍,目的是提高学生的专业英语阅读能力,使其能够在今后的工作中自主地吸收国际同行的有益经验和知识。

<<机械英语>>

内容概要

教育主管部门与时俱进，对高职高专的英语教学适时做出调整，提出“实用为主，工学结合”的指导原则，在日常的英语教学中加大了专业英语教学的比重，凸显了专业英语教学的重要性。

《机械英语》正是为了满足广大高职高专院校开设专业英语课程的要求，遵循教育部高等教育司颁发的《高职高专教育英语课程教学基本要求》的指导原则而进行编写的。

书籍目录

UNIT 1 Engineering Drawing
Reading and Translating
Section A Types of Views
Section B Mechanical Drawings and Dimensioning
Listening and Speaking
Writing : Description of First-angle Projection
UNIT 2 Tolerance and Fits
Reading and Translating
Section A Limits , Tolerances and Fits
Section B Interchangeability and Measurement
Listening and Speaking
Writing : Introduction of a Company
UNIT 3 Engineering Materials
Reading and Translating
Section A Metals and Their Properties
Section B Nonmetal Materials
Listening and Speaking
Writing : Order for Products
UNIT 4 Machine Elements
Reading and Translating
Section A Transmissions
Section B Shafts and Accessories
Listening and Speaking
Writing : Email for Request
UNIT 5 Hydraulic Drive
Reading and Translating
Section A Pumps and Actuators
Section B Valves and Basic Hydraulic Circuits
Listening and Speaking
Writing : Advertisement
UNIT 6 Machine Tools
Reading and Translating
Section A Machine Tools
Section B In Machine Shop
Listening and Speaking
Writing : Letters for Machinery Exportation
UNIT 7 Forming
Reading and Translating
Section A Hot Working
Section B Cold Working
Listening and Speaking
Writing : Complaint Letter
UNIT 8 Molding
Reading and Translating
Section A Metal Casting
Section B Plastic Molding
Listening and Speaking
Writing : Illustrating Sand Casting Process
UNIT 9 NC and CNC
Reading and Translating
Section A Numeral Control (NC)
Section B Computerized Numeral Control (CNC/DNC)
Listening and Speaking
Writing : Follow-up Letter
UNIT 10 CAD and CAM
Reading and Translating
Section A Computer-aided Design (CAD)
Section B Computer-aided Manufacturing (CAM)
Listening and Speaking
Writing : Dealing with Problems
课文参考译文
Keys for Exercises
Bibliography

章节摘录

In the Periodic Table of Elements by a Russian chemist , Dmitri Mendeleev , about half of the elements are metals. Metals are usually divided in two groups : ferrous and nonferrous. In contrast to ferrous , nonferrous metals do not contain any iron. Copper , aluminum , chromium are some examples. From the standpoint of commerce , however , an absolutely pure metal has never appealed to engineers , such as pure iron , which is too soft for machine parts. And of all these metallic elements, only a few are suitable for the engineering purpose. Steel and cast iron are the most common metals in use. An alloy is a mixture of one or more elements in a metallic matrix. For example , steels are alloys of iron and carbon by adding one or more small amounts of the following elements : nickel , chromium , manganese , silicon , tungsten and so on. Carbon is the most important element in steel. It determines the mechanical properties by the adding percentage of carbon. In this connection , low-carbon steels (less than 0.30%) , with better forming properties. Are usually used for low-strength products. And medium-carbon steels (0.30%-0.60%) can meet the requirement of forgings. strength and ductility for mechanical parts or machines.
