<<几何分析与相对论>>

内容概要

自从爱因斯坦提出广义相对论以来, 微分几何就与广义相对论密不可分。微分几何和几何分析为学习广义相对论提供方法以及正确的框架, 而广义相对论激发富有挑战性的各种问题。

本书包含23篇几何分析和广义相对论各领域的综述性文章, 作者均为该领域的知名专家。

几何分析方面的内容包括: Yamabel问题、平均曲率流、极小曲面、调和映照、Ricci流、胶合与分裂结构、函数论、流形的塌陷、Kahler-Einstein度量、完备流形的渐近几何以及Teichmuller空间几何等。

广义相对论方面的内容包括: 正质量定理、Penrose不等式、标量曲率及Einstein约束方程、准局域质量泛函、高维黑洞拓扑、渐近双曲流形的正质量定理等。

本书可供几何分析或相对论领域的研究人员和研究生参考。

<<几何分析与相对论>>

作者简介

编者：（美国）布雷（Hubert L.Bray）（美国）米尼克兹（William P.Minicozzi）

<<几何分析与相对论>>

书籍目录

on the positive mass, penrose, and zas inequalities in general
dimension
hubert l bray
1 dedication
2 introduction
3 a trio of inequalities
references
recent progress on the yamabe problem
simon brendle, fernando c marques
1 the yamabe problem
2 the compactness conjecture
3 non-compactness results in dimension $n > 25$
4 a compactness result in dimension $n < 24$
5 the parabolic yamabe flow
references
some recent progress on mean curvature flow for entire lagrangian
graphs
jingyi chen
1 introduction
2 longtime existence with lipschitz continuous initial data
3 uniqueness and viscosity solutions
4 self-similar solutions
references
radial viewpoint on minimal surfaces
jaigyoung choe
1 introduction
2 cone
3 horizon
4 non-euclidean space
5 ray preserving metric
6 varying curvature
7 embeddedness
references
minimal surfaces and mean curvature flow
tobias h colding, william p minicozzi ii
1 introduction
2 harmonic functions and the heat equation
3 energy of a curve
4 birkhoff: a closed geodesic on a two sphere
5 curve shortening flow
6 minimal surfaces
7 classification of embedded minimal surfaces
8 mean curvature flow
9 width and mean curvature flow
10 singularities for mcf

<<几何分析与相对论>>

11 smooth compactness theorem for self-shrinkers

12 the entropy

13 an application

14 non-compact self-shrinkers

references

scalar curvature and the einstein constraint equations

justin corvino, daniel pollack

1 introduction

2 the constraint equations

3 a tour of asymptotically flat solutions

4 the conformal method

5 gluing constructions

references

on the intrinsic differentiability theorem of gromov-schoen

georgios daskalopoulos, chikako mese

1 introduction

2 definitions

3 main theorem

references

minimal surface techniques in riemannian geometry

a ilana fraser

1 introduction

2 brief overview of some geodesic methods

3 existence of minimal surfaces

4 second variation theory for minimal surfaces and

applications

references

stability and rigidity of extremal surfaces in riemannian

geometry and general relativity

gregory j galloway

1 minimal hypersurfaces in manifolds of nonnegative scalar
curvature

2 marginally outer trapped surfaces

3 positivity of mass for asymptotically hyperbolic manifolds

references

convex hypersurfaces of constant curvature in hyperbolic
space

bo guan, joel spruck

1 introduction

2 formulas on hypersurfaces

3 the asymptotic angle maximum principle and gradient
estimates

4 curvature estimates

5 uniqueness and foliations

references

ricci flow in two dimensions

james isenberg rafe mazzeo, natasa sesum

<<几何分析与相对论>>

1 introduction
2 general considerations
3 compact surfaces
4 open surfaces
5 flows on incomplete surfaces
references
doubling and desingularization constructions for minimal surfaces
nikolaos kapouleas
1 introduction
2 doubling constructions
3 desingularization constructions
4 minimal surfaces in the round three-sphere
5 the building blocks for the desingularization construction
6 an initial surface for the desingularization construction
7 the family of initial surfaces for the desingularization construction
8 main estimates and outline of the proof
references
the metric properties of lagrangians
yng-ing lee
1 introduction
2 a short survey
3 definitions and properties
4 singularities and geometric measure theory
5 gluing and singular perturbation
references
structure of complete manifolds with positive spectrum
peter li
1 introduction
2 riemannian case
3 kahler case
4 quaternionic kahler manifolds, cayley manifolds, and locally symmetric spaces
5 manifolds of finite volume
6 further generalizations
references
topology of sobolev mappings and associated variational problems
fang hua lin
introduction
1 analytical and topological properties of sobolev maps
2 singularity of energy minimizing maps
3 limits of singular sets of p-energy minimizing maps
references
a survey of research on boundary behavior of compact manifolds via the positive mass theorem

<<几何分析与相对论>>

pengzi miao

1 introduction

2 statement of the positive mass theorem

3 on compact manifolds with nonnegative scalar curvature

4 on compact manifolds with negative scalar curvature

references

recent progress on singularities of lagrangian mean

curvature flow

andre Neves

1 introduction

2 preliminaries

3 basic techniques

4 applications i: blow-ups

5 applications ii: self-expanders

6 application iii: stability of singularities

7 open questions

references

geometric structures of collapsing riemannian manifolds i

aaron naber, gang tian

1 introduction

2 structure of collapsed spaces

3 geometry of toric quotients

4 geometry of toric quotients ii

5 proof of theorems 11 and 12

6 proof of theorem 13

a geometry of quotients

b orbifolds

references

deformation of kahler-einstein metrics

xiaofeng sun, \$hing-tung yam

1 introduction

2 complex structures of kahler-einstein manifolds

3 deformation of kahler-einstein metrics

4 local trivialization of polarization bundles and deformation of sections

5 curvature of L^2 metrics on direct image sheaves

6 appendix

references

reverse bubbling in geometric flows

peter m topping

1 introduction

2 the harmonic map flow

3 ricci flow

4 addendum -- mean curvature flow

references

review on harmonic diffeomorphisms between complete noncompact surfaces

<<几何分析与相对论>>

tom y h wan

1 introduction

2 harmonic map theory of universal teichmüller space

3 asymptotic behavior of open harmonic embedding from the complex plane into hyperbolic plane

references

compactifications of complete riemannian manifolds and their applications

xiaodong wang

1 introduction

2 the geometric compactification

3 the martin compactification

4 the busemann boundary

5 a comparison theorem

references

some aspects of weil-petersson geometry of teichmüller spaces

sumio yamada

1 introduction

2 harmonic maps into T and an application

3 finite rank properties of

4 coxeter-tits construction

5 weil-petersson geodesic completeness

6 weil-petersson geometry of the universal teichmüller space

7 embeddings of the coxeter complex into UT

8 summary and open problems

references
