

<<无线数据传输网络>>

图书基本信息

书名：<<无线数据传输网络>>

13位ISBN编号：9787115094674

10位ISBN编号：7115094675

出版时间：2001-8

出版单位：人民邮电出版社

作者：Gil Held

页数：344

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<无线数据传输网络>>

内容概要

>适合希望了解无线网络数据传输和应用的广大师生和技术人员阅读，对无线网络开发人员更是一本很内行的参考书。

<<无线数据传输网络>>

书籍目录

List of Tables and Figures

Preface

About the Author

About the Reviewers

About the Contributors

Chapter 1 Welcome to the Revolution 1

* Evolving Wireless Applications 2

· Personal Positioning 3

· Vehicle Positioning 4

· Meter Reading 5

· Mobile Banking and Finance 5

· Brick and Mortar Shopping 6

· Email 7

· Wireless Docking 7

· Web Surfing 8

· LAN Access and Mobility Ports 8

* Book Preview 8

· Communications Basics 9

· AMPS 9

· D-AMPS 9

· GSM 10

· CDMA 10

· The WAP Suite 10

· LMDS 11

· MMDS 11

· Bluetooth 11

· Wireless LANS 12

Chapter 2 Communications Basics 13

* Powers of 10 14

* Frequency 15* Wavelength 16

* The Frequency Spectrum 17

* Bandwidth 18

* Power Measurements 18

· Bel 19

· Decibel 20

· Decibel above 1 mW 20

* Signal-to-Noise Ratio 21

* Propagation Loss 23

* Transmission Rate Constraints 24

· Nyquist Relationship 25

· Shannon's Law 27

* Radiofrequency Spectrum Allocation 28

· U.S.Spectrum Allocation 28

· Band Nomenclature 29

· Applications 31

<<无线数据传输网络>>

- Chapter 3 AMPS 33
 - * Evolution 34
 - * Components 36
 - Component Relationship 36
 - * Network Access 37
 - * Frequency Utilization 37
 - Frequency Allocation 38
 - Channel Center Frequencies 41
 - Channel Utilization 41
 - * Signaling 51
 - Voice-Channel Signaling 52
 - Cochannel Interference 53
 - * Data over AMPS 54
 - Case Study and Lessons Learned 54
 - Operating Rates 56
 - Cellular-Ready Modem Protocols 56
- Chapter 4 D-AMPS 63
 - * Overview 64
 - * TDMA 65
 - Advantages 67
 - Disadvantages 67
 - * Digital Radio 67
 - * Voice-Coding Methods 68
 - Channel Banks 68
 - PCM 68
 - TDM and Line Driver 70
 - Waveform Coding 70
 - Voice Coding 70
 - Hybrid Coding 71
 - * Modulation 72
 - * Baud Rate 72
 - * TDM Operation 73
 - Frames 73
 - Time-Slot Format 75
 - Digital Channel Traffic Signaling 77
 - Control Channel Operations 78
 - * The IS-136 Digital Control Channel 78
 - PCS Overview 79
 - Extended Battery Life 80
 - Frequency Utilization 81
 - Logical Channels 81
 - Superframes and Hyperframes 84
 - * The PCS Layered Model 84
 - * PCS Messaging 86
 - * Modem Operations 86
- Chapter 5 GSM 87
 - * Evolution 88

<<无线数据传输网络>>

- * Frequency Allocation 88
- * Governing Body 89
- * GSM Services 89
 - Voice Transport 90
 - Data Services 90
 - Bearer Services 91
 - Teleservices 91
 - Supplementary Services 92
 - The Subscriber Identity Module 93
- * Frequency Allocation 94
 - Initial European GSM 94
 - United Kingdom GSM 95
 - PCS 1900 96
- * TDMA Operations 97
 - Time -Slot Utilization 98
- * Speech Coding 98
- * Framing and Channel Organization 99
 - The GSM Multiframe 99
- * Data over GSM 103
 - Modem Incompatibility 103
 - Adapter Use 103
- * Information Transfer Modes 104
- * Inbound Data/Fax 104
- * Data Compression 105
- * Short Message Service 105
 - Features 106
 - Utilization 108
 - SMS Centers 109
 - Using the Internet 109
- Chapter 6 CDMA 113
 - * Evolution 114
 - CITA Requirements 114
 - Deployments 115
 - IS-95 115
 - * Overview 115
 - Comparison With AMPS and TDMA 116
 - Capacity 118
 - Frequency Allocation 118
 - Speech Coding 122
 - * Channel Structure 124
 - Downlink Channels 124
 - Uplink Channels 129
 - * CDMA Data Services 131
 - The CDMA Air-Interface Protocol Stack 131
 - SMS 137
 - * 3G-CDMA 138
 - UMTS/IMT-2000 138

<<无线数据传输网络>>

- CDMA2000 139
- Chapter 7 The WAP Protocol Suite 143
 - * Overview 144
 - Evolution 144
 - Basic Components 145
 - Architecture 146
 - * Wireless Datagram Protocol 152
 - Port Number Use 152
 - The Adaptation Layer 154
 - Protocol Operation 154
 - * Wireless Transport Layer Security 158
 - Connection Management 159
 - Encryption Support 159
 - * The Wireless Application Environment 162
 - Components 163
 - The Wireless Markup Language 163
- Chapter 8 Local Multipoint Distribution Service 175
 - * Overview 176
 - * Frequency Allocation 177
 - Frequency Blocks 177
 - Frequency Bands 178
 - Bandwidth and Capacity 178
 - * Architecture 180
 - Frequency Considerations 180
 - The LMDS Cell 180
 - Base Station 182
 - The Network Interface Unit 183
 - Access Methods 184
 - Modulation 186
 - * System Capacity 188
 - FDMA 188
 - TDMA 190
 - Increasing Cell Capacity 190
 - * LMDS Advantages 191* LMDS Disadvantages 191
- Chapter 9 Multichannel Multipoint Distribution System 193
 - * Overview 194
 - Frequency Band 195
 - Potential Market 195
 - Basic Architecture 195
 - Advantages of Use 196
 - Potential Disadvantages 196
 - * Evolution 196
 - MDS 197
 - MMDS 197
 - * Frequency Assignments 199
 - * Transmission Methods 202
 - Multipath Communications 202

<<无线数据传输网络>>

- Minimizing Multipath Reflections 203
- * Summary 207
- Chapter 10 Bluetooth 209
 - * Rationale 210
 - Compatibility Problems 210
 - Bluetooth to the Rescue 211
 - Potential Utilization 211* Evolution 213
 - The Code Name 213
 - * Overview 214
 - * Comparison with Infrared(IR) 215
 - * System Architecture 215
 - Master-Slave Relationship 216
 - Power Requirements 216
 - Power Operating Modes 217
 - Interface Support 218
 - The Protocol Stack 218
 - Adopted Protocols 221
 - * Communications Channels 221
 - Networking 222
- Chapter 11 Wireless LSNs 229
 - * General Characteristics 230
 - Spread Spectrum Technology 230
 - * Applications 238
 - Inventory Control 238
 - Hospital 238
 - Hotel 239
 - Training 239
 - Trade Shows 239
 - Wireless Rationale 240
 - * The IEEE 802.11 Wireless LAN Standard 240
 - Initial Effort 240
 - Basic Configuration 241
 - * Frequency Selection 241
 - * Environment 242
 - * Architecture 242
 - Operation 261
 - * Wireless Home Networking 265
 - Overview 265
 - System Requirements 265
 - Technical Characteristics 266
 - Appendix A 271
 - Appendix B 291
 - Appendix C 309
 - Glossary 321
- Index 331
