

图书基本信息

书名 : <<无线与移动通信中的信号处理新技术(第1册) (平装)>>

13位ISBN编号 : 9787115108289

10位ISBN编号 : 7115108285

出版时间 : 2002-11

出版时间 : 第1版 (2002年1月1日)

作者 : 贾纳科斯

页数 : 434

版权说明 : 本站所提供之下载的PDF图书仅提供预览和简介,请支持正版图书。

内容概要

《无线与移动通信中的信号处理新技术》丛书，介绍了近年来无线与移动通信中使用的信号处理（SP）工具的最新的重要进展，以及世界范围内该领域的领先者的贡献。

本书是两本书中的第1册。

本丛书的内容涵盖了范围广泛的技术和方法论，包括噪声与干扰消除、调制解调器设计、移动互联网业务、下一代音频/视频广播、蜂窝移动电话和无线多媒体网络等。

本书（第1册）重点阐述单用户点对点链路的信道识别与均衡的关键技术。

由于信息承载信号是在衰落介质中传播的，所以现代的均衡器必须充分考虑移动无线信道的可变性，减小符号间干扰和同（共）信道干扰，并抑制在单个或多个传感器的接收机中的噪声。

本书介绍了最近提出的带宽节省（半）盲算法与性能分析，以及线性预编码技术，这些技术利用发射冗余使基于训练序列的系统获得明显的改善。

本书内容包括：盲识别与反卷积的子空间方法 有色信号驱动的信道的盲识别与均衡 最优子空间方法；多信道均衡的线性预测算法 FIR多信道估计的半盲方法 盲判决反馈均衡等 本书还介绍了世界范围内各种期刊中的研究成果，全面汇集了用于优化单用户点对点链路的先进信号处理技术。

本书对于通信工程、研究人员、管理人员、通信系统设计人员和参与最新通信系统设计或构造的同行将是极具价值的。

书籍目录

PREFACE 1 CHANNEL ESTIMATION AND EQUALIZATION USING HIGHER-ORDER STATISTICS
 1.1 Introduction 1.2 Single-User Systems :Baud Rate Sampling 1.2.1 Cumulant Matching 1.2.2 Inverse Filter Criteria 1.2.3 Equation Error Formulations 1.2.4 Simulation Examples 1.3 Single-user Systems :Fractional Sampling 1.3.1 Cumulant Matching 1.3.2 Simulation Example 1.4 Multi-user Systems 1.4.1 Inverse Filter Criteria 1.4.2 Cumulant Matching 1.4.3 Simulation Examples 1.5 Concluding Remarks
 Bibliography 2 PERFORMANCE BOUNDS FOR BLIND CHANNEL ESTIMATION 2.1 Introduction 2.2 Problem Statement and Preliminaries 2.2.1 The Blind Channel Identification Problem 2.2.2 Ambiguity Elimination 2.2.3 The Unconstrained FIM 2.2.4 Achievability of the CRB 2.3 CRB for Constrained Estimates 2.4 CRB for Estimates of Invariants 2.5 CRB for Projection Errors 2.6 Numerical Examples 2.7 Concluding Remarks Appendix 2.A Proof of Proposition 2 Bibliography3 SUBSPACE METHOD FOR BLIND IDENTIFICATION AND DECONVOLUTION 3.1 Introduction 3.2 Subspace Identification of SIMO Channels 3.2.1 Practical Considerations 3.2.2 Simplifications in the Two-Channel Case 3.3 Subspace Identification of MIMO Channels 3.3.1 Rational Spaces and Polynomial Bases 3.3.2 The Structure of the Left Nullspace of a Sylvester Matrix 3.3.3 The Subspace Method 3.3.4 Advanced Results 3.4 Applications to the Blind Channel Estimation of CDMA Systems 3.4.1 Model Structure 3.4.2 The Structured Subspace Method: The Uplink Case 3.4.3 The Structured Subspace Method: The Downlink Case 3.5 Undermodeled Channel Identification 3.5.1 Example: Identifying a Significant Part of a Channel 3.5.2 Determining the Effective Impulse Response Length Appendix 3.A 3.A.1 Proof of Theorem 1 3.A.2 Proof of Proposition 3 3.A.3 Proof of Theorem 4 3.A.4 Proof of Proposition 5 Bibliography 4 BLIND IDENTIFICATION AND EQUALIZATION OF CHANNELS DRIVEN BY COLORED SIGNALS 4.1 Introduction 4.2 FIR MIMO Channel 4.2.1 Original Model 4.2.2 Slide-Window Formulation 4.2.3 Noise Variance and Number of Input Signals 4.3 Identifiability Using SOS 4.3.1 Identifiability Conditions 4.3.2 Some Facts of Polynomial Matrices 4.3.3 Proof of the Conditions 4.3.4 When the Input is White 4.4 Blind Identification via Decorrelation 4.4.1 The Principle of the BID 4.4.2 Constructing the Decorrelators 4.4.3 Removing the GCD of Polynomials 4.4.4 Identification of the SIMO Channels 4.5 Final Remarks Bibliography5 OPTIMUM SUBSPACE METHODS 5.1 Introduction 5.2 Data Model and Notations 5.2.1 Scalar Valued Communication Systems 5.2.2 Multi Channel Communication Systems 5.2.3 A Stacked System Model 5.2.4 Correlation Matrices 5.2.5 Statistical Assumptions 5.3 Subspace Ideas and Notations 5.3.1 Basic Notations 5.4 Parameterizations 5.4.1 A Noise Subspace Parameterization 5.4.2 Selection Matrices 5.5 Estimation Procedure 5.5.1 The Signal Subspace Parameterization 5.5.2 The Noise Subspace Parameterization 5.6 Statistical Analysis 5.6.1 The Residual Covariance Matrices 5.6.2 The Parameter Covariance Matrices 5.7 Relation to Direction Estimation 5.8 Further Results for the Noise Subspace Parameterization 5.8.1 The Results 5.8.2 The Approach 5.9 Simulation Examples 5.10 Conclusions Appendix 5.A Bibliography6 LINEAR PREDICTIVE ALGORITHMS FOR BLIND MULTICHANNEL IDENTIFICATION 6.1 Introduction 6.2 Channel Identification Based on Second Order Statistics: Problem Formulation 6.3 Linear Prediction Algorithm for Channel Identification 6.4 Outer-Product Decomposition Algorithm 6.5 Multi-step Linear Prediction 6.6 Channel Estimation by Linear Smoothing (Not Predicting) 6.7 Channel Estimation by Constrained Output Energy Minimization 6.8 Discussion 6.8.1 Channel Conditions 6.8.2 Data Conditions 6.8.3 Noise Effect 6.9 Simulation Results 6.10 Summary Bibliography7 SEMI-BLIND METHODS FOR FIR MULTICHANNEL ESTIMATION 7.1 Introduction 7.1.1 Training Sequence Based Methods and Blind Methods 7.1.2 Semi-Blind Principle 7.2 Problem Formulation 7.3 Classification If Semi-Blind Methods 7.4 Identifiability Conditions for Semi-Blind Channel Estimation 7.4.1 Identifiability Definition 7.4.2 TS Based Channel Identifiability 7.4.3 Identifiability in the Deterministic Model 7.4.4 Identifiability in the Gaussian Model 7.5 Performance Measure: Cramer-Rao Bounds 7.6 Performance Optimization Issues 7.7 Optimal Semi-Blind Methods 7.8 Blind DML 7.8.1 Denoised IQML (DIQML) 7.8.2 Pseudo Quadratic ML (PQML) 7.9 Three

Suboptimal DML Based Semi-Blind Criteria 7.9.1 Split of the Data 7.9.2 Least Squares-DML 7.9.3
Alternating Quadratic DML (AQ-DML) 7.9.4 Weighted-Least-Squares-PQML (WLS-PQML) 7.9.5
Wimulations 7.10 Semi-Blind Criteria as a Combination of a Blind and a TS Based Criteria 7.10.1 Semi-Blind
SRM Example 7.10.2 Subspace Fitting Example 7.11 Performance of Semi-Blind Quadratic Criteria 7.11.1
MU and MK infinite 7.11.2 MU infinite, MK finite 7.11.3 Optimally Weighted Quadratic Criteria 7.12
Gaussian Methods 7.13 Conclusion Bibliography 8 A GEOMETRICAL APPROACH TO BLIND SIGNAL
ESTIMATION 8.1 Introduction 8.2 Design Criteria for Blind Estimators 8.2.1 The Constant Modulus
Receiver 8.2.2 The Shalvi-Weinstein Receiver 8.3 The Signal Space Property and Equivalent Cost Functions
8.3.1 The Signal Space Property of CM Receivers 8.3.2 The Signal Space Property of SW Receivers 8.3.3
Equivalent Cost Functions 8.4 Geometrical Analysis of SW Receivers: Global Characterization 8.4.1 The
Noiseless Case 8.4.2 The Noisy Case 8.4.3 Domains of Attraction of SW Receivers 8.5 Geometrical Analysis
of SW Receivers: Local Characterizations 8.5.1 Local Characterization 8.5.2 MSE of CM Receivers 8.6
Conclusion and Bibliography Notes 8.6.1 Bibliography Notes Appendix 8.A Proof of Theorem 5 Bibliography
9 LINEAR PRECODING FOR ESTIMATION AND EQUALIZATION OF FREQUENCY-SELECTIVE
CHANNELS 9.1 System Model 9.2 Unifying Filterbank Precoders 9.3 FIR-ZF Equalizers 9.4 Jointly Optimal
Precoder and Decoder Design 9.4.1 Zero-order Model 9.4.2 MMSE/ZF Coding 9.4.3 MMSE Solution wit
Constrained Average Power 9.4.4 Constrained Power Maximum Information Rate Design 9.4.5 Comparison
Between Optimal Designs 9.4.6 Asymptotic Performance 9.4.7 Numerical Examples 9.5 Blind Symbol
Recovery 9.5.1 Blind Channel Estimation 9.5.2 Comparison with Other Blind Techniques 324 9.5.3
Statistical Efficiency 9.6 Conclusion Bibliography 10. BLIND CHANNEL IDENTIFIABILITY WITH AN
ARBITRARY LINEAR PRECODER 10.1 Introduction 10.2 Basic Theory of Polynomial Equations 10.2.1
Definition of Generic 10.2.2 General Properties of Polynomial Maps 10.2.3 Generic and Non-Generic Points
10.2.4 Invertibility Criteria 10.3 Inherent Scale Ambiguity 10.4 Weak Identifiability and the CRB 10.5 Arbitrary
Linear Precoders 10.6 Zero Prefix Precoders 10.7 Geometric Interpretation of Precoding 10.7.1 Linear
Precoders 10.7.2 Zero Prefix Precoders 10.8 Filter Banks 10.8.1 Algebraic Analysis of Filter Banks 10.8.2
Spectral Analysis of Filter Banks 10.9 Ambiguity Resistant Precoders 10.10 Symbolic Methods 10.11 Conclusio
Bibliography 11 CURRENT APPROACHES TO BLIND DECISION FEEDBACK EQUALIZATION 11.1
Introduction 11.2 Notation 11.3 Data Model 11.4 Wiener Filtering 11.4.1 Unconstrained Length MMSE
Receivers 11.4.2 Constrained Length MMSE Receivers 11.4.3 Example: Constrained Versus Unconstrained
Length Wiener Receivers 11.5 Blind Tracking Algorithms 11.5.1 DD-DFE 11.5.2 CMA-DFE 11.5.3
Algorithmic and Structural Modifications 11.5.4 Summary of Blind Tracking Algorithms 11.6 DFE
Initialization Strategies 11.6.1 Generic Strategy 11.6.2 Multistage Equalization 11.6.3 CMA-IIR Initialization
11.6.4 Local Stability of Adaptive IIR Equalizers 11.6.5 Summary of Blind Initialization Strategies 11.7
Conclusion Appendix 11.A Spectral Factorization Appendix 11.B CL-MMSE-DFE Appendix 11.C
DD-DFE Local Convergence Appendix 11.D Adaptive IIR Algorithm Updates Appendix 11.E CMA-AR Local
Stability Bibliography
