章节摘录

At a White House briefing that year , a spokesman said the United States would "respond with overwhelming force" to the use of weapons of mass destruction against the United States , its forces , or allies , and said " all options" would be available to the president. The draft , dated March 15 , would provide authoritative guidance for commanders to request presidential approval for using nuclear weapons , and represent , the Pentagon's first attempt to revise procedures to reflect the Bush preemption doctrine. A previous version , completed in 1995 during the Clinton administration , contains no mention of using nuclear weapons preemptively or specifically against threats from weapons of mass destruction. Titled "Doctrine for Joint Nuclear Operations" and written under the direction of Air Force General Richard B. Myers , chairman of the Joint Chiefs of Staff , the draft !

document is unclassified and available on a Pentagon website. It is expected to be signed within a few weeks by Air Force Lieutenant General Norton A. Schwartz , director of the Joint Staff , according to Navy Commander Dawn Cutler , a public affairs officer in Myers's office. Meanwhile , the draft is going through final coordination with the military services , the combatant commanders , Pentagon legal authorities , and Rumsfeld's office , Cutler said in a written statement. A "summary of changes" included in the draft identifies differences from the 1995 doctrine and says the new document "revises the discussion of nuclear weapons use across the range of military operations. " The first example for potential nuclear weapon use listed in the draft is against an enemy that is using " or intending to use WMD" against US or allied , multinational military forces or civilian populations.

Another scenario for a possible nuclear preemptive strike is in case of an "imminent attack from adversary biological weapons that only effects from nuclear weapons can safely destroy. " That and other provisions in the document appear to refer to nuclear initiatives proposed by the administration that Congress has thus far declined to fully support. The Joint Staff draft doctrine explains that despite the end of the Cold War , the proliferation of weapons of mass destruction " raises the danger of nuclear weapons use.
