## <<走进中国100位院士的家>>

### 前言

On China ' S road to prosperity and modernization , “ academi-cians ” are an extraordinary group . In China , the word “ academician ” refers to members of theChinese Academy of Sciences and Chinese Academy OfEngineering . They are the outstanding representatives of science , technology and engineering in China . Academician is a perma-nent honorary academic title . Academicians are elected from elitescientists in China and abroad every two years , based onrecommendation . Usually the nominee should be the recipient Ofan award higher than National Award for Science and TechnologyProgress ( Grade 2 ) or National Award for Natural Sciences ( Grade 2 ) . The first 81 members of the Academic Committee ( their title was changed in 1994 to “ academician ” ) were selectedin March 1948 by the state . 1n 1955 the Chinese Academy OfSciences began to appoint academicians . In 1994 the ChineseAcademy of Engineering began to do the same . From 1955 to2007 more than 1 , 800 academicians were chosen , among whomnearly 100 were foreign academicians .

### 内容概要

This book contains the records of interviews made by reporters with 100 academicians in their homes. We hope to open a window for readers to get to know academicians' lives and personal charm. Therefore we avoided an overall, concrete description of academicians' experiences and achievements. Through the interviews we hope to display the academicians' values, attitudes to life and personalities. The 100 academicians interviewed are engaged in different fields of research, and their characters are all different. Nevertheless, we found that their values and attitudes to life are the same.

### 后记

It is said that even though you are not an artist you can learn to appreciate art ; even though you are not an athlete you can enjoy football ; and even though you are not a scientist it doesn't mean you cannot comprehend and appreciate science . The publication of this book is meant to invite readers to meet Chinese academicians so that they can learn to understand and appreciate science . As early as in 2000 we began to plan the publication of this book . Later , a group of reporters , mainly journalists from the Qianjiang Evening News, began to carry out interviews with academicians . Because of the length of the editing process we updated some of the contents . But we discovered that several years later , when we again interviewed the academicians , their lives were unchanged . So we have preserved much of the contents of the original interviews , because they are a true record of the academicians' lives .
