Boxes

- 5 . 1 A clash of cultures
- 5 . 2 National and organisational cultural dimensions

6 International ethical and ecological environment

Introduction

Business ethics

Ethics and the corp orate culture

Different ethic

章节摘录

版权页：插图： Problems with international joint ventures in China When the first Sino-foreign joint venture, the Beijing Aviation Food Co., was established in 1980, it led to the beginning of intensive foreign direct investment (fdi) into China, which in turn has contributed to China's continuous growth of 8% every year for the last 15 years. World Trade Organisation (WTO) entry has also boosted inward fdi into China. Combine this with Beijing successfully hosting the Olympics in 2008 and a population of nearly 1.3 billion and it soon becomes evident why so many foreign firms are hurriedly trying to gain a presence in China, with Chinese people having a well-earned reputation for thrift, holding savings of more than US\$1 trillion, nowhere is this desire more apparent than in the finance sector. For example, in 2002, Newbridge Capital, the US-based multinational finance corporation sought to tap into this huge savings stockpile and paid US\$1.8 billion for nearly 20% of Shenzhen Development Bank, while HSBC paid US\$600 million for 10% of Pingan Insurance. Many foreign companies turn to the international joint venture (IJV) as their chosen mode of entry into China. To foreign investors there exist three modes of foreign entry, the first two of which are types of IJV - equity joint venture (EJV), cooperative joint venture (CJV) and wholly-owned foreign enterprises (WOFE). However, IJVs continue to experience high rates of dissolution. The problems associated with IJVs in China have been well documented (Child 1991; Lu and Bjorkman 1998). Harrigan (1986) states that 'Alliances fail because operating managers do not make them work, not because contracts are poorly written.' One reason for foreign investors to shy away from IJVs is their fear of leaking proprietary technology and know-how to Chinese partners and thus losing long-term competitive advantages (Deng 2001). To the Chinese partner gaining invaluable knowledge is a main strategic objective for entering into an IJV. For the Western partner, the problem is knowing how much of their technical expertise should be shared with their partner. A key factor that allows for sharing information is the establishment of trust between parties. In Chinese culture, trust is very much built on personal relationships and involves socialising and working together in order to build trust. In Western society, trust between business partners is underlined by the contract, therefore there is likely to be less importance placed on building relationships. It is often very difficult to build trust between two companies that originate from very different cultural backgrounds. Lack of cultural understanding and different strategic objectives are two of the main reasons why IJVs continue to experience high failure rates.
