## 内容概要

《2012在职攻读硕士学位全国联考英语考试模拟考场》分为两大部分。

第一部分为15套模拟试题。

编者严格以最新考试大纲为依据，精心编制，力求使题型、题量和试卷结构与真题完全一致，所选材料新，内容范围广，覆盖面宽，信息量大，具有较高的可信度。

第二部分为试题解析。

编者除了提供各题答案外，还对题目进行了分析、讲解。

词汇和语法结构部分注重语言点的解释；阅读理解和完形填空部分给出文章大意并着重分析语篇结构和作者观点的阐述方法；英译汉和短文写作部分除了提供参考译文和范文，还对复杂的句子进行了结构分析，并给出与题目相关的其他表达方式，以拓展考生的思维，使其学会举一反三，灵活表达。

章节摘录

版权页：插图： using her cell-phone to access the Internet and track her city's public transit system. When asked why she used the wireless Internet so frequently, she replied, "What are you talking about? I don't know anything about this wireless Internet stuff, I just know the bus is here." Regardless of whether you want to admit it, a lot of us are like that old Finnish woman. When it comes to new mobile applications, many of us do not realize the capability and power that we hold, literally, in our hands. What we're looking at today is the mobile Internet in its infancy. Now that using the Internet from home or work has saturated much of society, the next logical step is to be able to use the Net when you're away from your desktop or laptop. Speech recognition is one way to do this, and there are a number of services, collectively called the "voice Web", that will make this possible. All you do is use a phone or wireless device to call a phone number, and speak commands to an intuitive system. It will then give you the information you're seeking, using either a synthesized voice or an audio file. In the United States and Europe, the hot technology for wireless devices is called WAP (Wireless Application Protocol), which is being considered as the world standard. WAP is supported by major phone companies including Nokia, Motorola and Ericsson, and is simply a means of transmitting information, much like HTML is a means of communicating on the Internet. Currently, wireless Internet connections may give you news, sports scores, stock quotes, and the weather if you're lucky. But if you've ever used this technology, you know it's slow, costly and doesn't seem worth the time and effort, if it works at all. "The mobile Internet was never designed to take over surfing the Web from a computer," explains Cherie Gary, spokeswoman at Nokia.
