

### 图书基本信息

书名 : <<数据结构Java描述--数据结构的设计原则与Java实现>>

13位ISBN编号 : 9787302021926

10位ISBN编号 : 7302021929

出版时间 : 1999-12

出版时间 : 清华大学出版社

作者 : Duane A.Bailey

页数 : 369

版权说明 : 本站所提供之下载的PDF图书仅提供预览和简介,请支持正版图书。

## 内容概要

这是一本让读者在现代程序设计环境中学习如何生成和分析常用数据结构的教材。书中介绍了如何用Java语言设计与实现传统的数据结构。

本书目下列情点：

- 用Java这一开放的、纯面向对象的语著作为描述语言。
- 采用面向对象方法来设计传统的数据结构；引入类、并面、继承、封装等思想。
- 全书结构严谨，前后连接自然，内容简洁而又清晰。
- 使用适应于事物本易规律的方法来描述事物，亦即用对象、类这一封装了数据和操作的结构来描述数据组织。
- 不仅讲述了如何用Java实现数据结构且抽象出一般的设计原则掌握并灵活运用这些原则可以使读者受益非浅。
- 书中有50多个已实现并经过测试的类。  
这些类构成一个结构包，可以作为程序员编程的基础。
- 书中有大量实例，告诉读者如何去使用定义好的数据结构。
- 每一章后有大量精心设计的提问，以帮助读者复习和进一步提高。

本书适合于本科高年级学生使用。

本书附录A虽有Java语言的简介，但对不熟悉Java语言的读者，建议最好在学习本书时花上几周时间了解Java语言。

书籍目录

Preface 0 Introduction  
0.1 Read Me  
0.2 He Cant Say That, Can He?  
1 The Object-Oriented Method  
1.1 Data Abstraction and Encapsulation  
1.2 The Object Model  
1.3 Object-Oriented Terminology  
1.4 Sketching an Example: A Word List  
1.5 A Special Purpose Class: A Bank Account  
1.6 A General Purpose Class: An Association  
1.7 Interfaces  
1.8 Who Is the User?  
1.9 Conclusions  
2 Comments, Conditions, and Assertions  
2.1 Pre- and Postconditions  
2.2 Assertions  
2.3 Craftsmanship  
2.4 Conclusions  
3 Vectors  
3.1 Application: The Word List Revisited  
3.2 Application: Word Frequency  
3.3 The Interface  
3.4 The Implementation  
3.5 Extensibility: A Feature  
3.6 Application: The Matrix Class  
3.7 Conclusions  
4 Design Thndamentals  
4.1 Asymptotic Analysis Tools  
4.1.1 Time and Space Complexity  
4.1.2 Examples  
4.1.3 The Trading of Time and Space  
4.2 Self Reference  
4.2.1 Recursion  
4.2.2 Mathematical Induction  
4.3 Properties of Design  
4.3.1 Symmetry  
4.3.2 Friction  
4.4 Conclusions  
5 Sorting  
5.1 Approaching the Problem  
5.2 Selection Sort  
5.3 Insertion Sort  
5.4 Mergesort  
5.5 QuickPort  
5.6 Sorting Objects  
5.7 Vector-Based Sorting  
5.8 Conclusions  
6 Lists  
6.1 Example: A Unique Program  
6.2 Example: Free-Lists  
6.3 Implementation: Singly-Linked Lists  
6.4 Implementation: Doubly-Linked Lists  
6.5 Implementation: Circularly-Linked Lists  
6.6 Conclusions  
7 Linear Structures  
7.1 Stacks  
7.1.1 Example: Simulating Recursion  
7.1.2 Vector-Based Stacks  
7.1.3 List-Based Stacks  
7.1.4 Comparisons  
7.2 Queues  
7.2.1 Example: Solving a Coin Puzzle  
7.2.2 List-Based Queues  
7.2.3 Vector-Based Queues  
7.2.4 Array-Based Queues  
7.3 Example: Solving Mazes  
7.4 Conclusions  
8 Iterates  
8.1 Javas Enumeration Interface  
8.2 The Iterate Interface  
8.3 Example: Vector Iterates  
8.4 Example: List Iterates  
8.5 Example: Filtering Iterates  
8.6 Conclusions  
9 Ordered Structures  
9.1 Comparable Objects  
9.1.1 Example: Comparable Integers  
9.1.2 Example: Comparable Associations  
9.2 Keeping Structures  
9.2.1 The OrderedStructure Interface  
9.2.2 The Ordered Vector  
9.2.3 Example: Sorting  
9.2.4 The Ordered List  
9.2.5 Example: The Modified Parking Lot  
9.3 Conclusions  
10 Thesel  
10.1 Terminology  
10.2 TheInterface  
10.3 Motivating Example: Expression Trees  
10.4 Implementation  
10.4.1 The BinaryTreeNode Implementation  
10.4.2 implementation of the BinaryTree Wrapper  
10.5 Traversals  
10.5.1 Preorder Traversal  
10.5.2 Ignored Traversal  
10.5.3 Postured Traversal  
10.5.4 Levelorder Traversal  
10.5.5 Recursion in Iterates  
10.6 Property-Based Methods  
10.7 Example: Huffman Compression  
10.8 Conclusions  
11 Priority Queues  
11.1 The Interface  
11.2 Example: Improving the Huffman Code  
11.3 Priority Vectors  
11.4 A Heap Implementation  
11.4.1 Vector-Based Heaps  
11.4.2 Example: Heapsort  
11.4.3 Skew Heaps  
11.5 Example: Circuit Simulation  
11.6 Conclusions  
12 Search knees  
12.1 Binary Search Trees  
12.2 Example: Tree Sort  
12.3 Implementation  
12.4 Splay Trees  
12.5 Splay Tree Implementation  
12.6 Conclusions  
13 Dictionaries  
13.1 TheInterface  
13.2 Unit Cost Dictionaries: Hash Tables  
13.2.1 Open Addressing  
13.2.2 External Chaining  
13.2.3 Generation of Hash Codes  
13.2.4 Analysis  
13.3 Ordered Dictionaries and Tables  
13.4 Example: Document Indexing  
13.5 Conclusions  
14 Graphs  
14.1 Terminology  
14.2 The Graph Interface  
14.3 Implementations  
14.3.1 Abstract Classes  
14.3.2 Adjacency Matrices  
14.3.3 Adjacency Lists  
14.4 Examples: Common Graph Algorithms  
14.4.1 Ratability  
14.4.2 Topological Sorting  
14.4.3 Transitive Closure  
14.4.4 All Pairs Minimum Distance  
14.4.5 Greedy Algorithms  
14.5 Conclusions  
A A Sip of Java  
A.1 A First Program  
A.2 Declarations  
A.2.1 Primitive Types  
A.2.2 Reference Types  
A.3 Important Classes  
A.3.1 The roadster!n Class  
A.3.2 PrintStreams  
A.3.3 Strings  
A.4 Control Constructs  
A.4.1 Conditional Statements  
A.4.2 Loops  
A.5 Methods  
A.6 Inheritance and Subtyping  
A.6.1 Inheritance  
A.6.2 Subtyping  
A.6.3 Interfaces and Abstract Classes  
B Use of the Keyword Protected  
C Principles  
D Structure Package Hierarchy  
E Selected Answers
