

<<数字与模拟通信系统(第5版)>>

图书基本信息

书名：<<数字与模拟通信系统(第5版)>>

13位ISBN编号：9787302029458

10位ISBN编号：7302029458

出版时间：1998-06

出版时间：清华大学出版社

作者：库奇

<<数字与模拟通信系统(第5版)>>

内容概要

内容简介

本书在继承前4版传统的基础上作了最新的处理。

它

提供了良好的理论基础知识，也包括了通信系统的实际问题
新版还包括了大量的学习辅助例子和家庭作业，其中许多
作业要借助个人计算机来求解。

全书8章和3个附录：1.

引论；2.信号与频谱；3.基带脉冲与数字信号；4.带通信号
原理和电路；5.调幅AM、调频FM和数字调制系统；6.

随机处理视频谱分析；7.通信系统性能；8.通信系统举例；

附录：A.各种数学公式、表格；B.概率和随机变量；C.计
算机通信标准和术语。

本书既可作工科大学生低年级或高年级的教材，也可作
研究生的概论性教科书，还是一本电子工程师的最新技术参
考书

书籍目录

CONTENTS

PREFACE

LIST OF SYMBOLS

1 INTRODUCTION

1-1 Historical Perspective

1-2 Digital and Analog Sources and Systems

1-3 Deterministic and Random Waveforms

1-4 Organization of This Book

1-5 Use of a Personal Computer and MATLAB

1-6 Block Diagram of a Communication System

1-7 Frequency Allocations

1-8 Propagation of Electromagnetic Waves

1-9 Information Measure

Example 1-1 Evaluation of Information and Entropy,

1-10 Channel Capacity and Ideal Communication Systems

1-11 Coding

Block Codes,

Convolutional Codes,

Code Interleaving,

Code Performance,

Trellis-Coded Modulation,

1-12 Preview

1-13 Study-aid Examples

Problems

2 SIGNALS AND SPECTRA

2-1 Properties of Signals and Noise

Physically Realizable Waveforms,

Time Average Operator,

Dc Value,

Power,

Example 2-1 Evaluation of Power,

Rms Value and Normalized Power,

Energy and Power Waveforms,

Decibel.

Phasors,

1-1 Fourier Transform and Spectra

Definition,

Example 2-2 Spectrum of an Exponential Pulse,

Properties of Fourier Transforms,

Parseval's Theorem and Energy Spectral Density,

Example 2-3 Spectrum of a Damped Sinusoid.

Dirac Delta Function and Unit Step Function,

Example 2-4 Spectrum of a Sinusoid,

Rectangular and Triangular-Pulses,

Example 2-5 Spectrum of a Rectangular Pulse,

<<数字与模拟通信系统(第5版)>>

Example 2-6 Spectrum of a Triangular Pulse,
Convolution, 58
Example 2-7 Convolution of a Rectangle with an Exponential,
Example 2-8 Spectrum of a Triangular Pulse by Convolution.
Example 2-9 Spectrum of a Switched Sinusoid,
2-3 Power Spectral Density and Autocorrelation Function
Power Spectral Density,
Autocorrelation Function,
Example 2-10 PSD of a Sinusoid,
2-4 Orthogonal Series Representation of Signals and Noise
Orthogonal Functions,
Example 2-11 Orthogonal Complex Exponential Functions,
Orthogonal Series,
2-5 Fourier Series
Complex Fourier Series,
Quadrature Fourier Series,
Polar Fourier Series.
Use Spectra for Periodic Waveforms,
Example 2-12 Fourier Coefficients for a Rectangular Wave,
Power Spectral Density for Periodic Waveforms,
Example 2-13 PSD for a Square Wave.
2-6 Review of Linear Systems
Linear Time-Invariant Systems,
Impulse Response.
Transfer Function,
Example 2-14 RC Low-Pass Filter,
Distortionless Transmission,
Example 2-15 Distortion Caused by a Filter.
2-7 Bandlimited Signals and Noise
Bandlimited Waveforms,
Sampling Theorem,
Impulse Sampling,
Dimensionality Theorem.
2-8 Discrete Fourier Transform
Using the DFT to Compute the Continuous Fourier Transform,
Example 2-16 DFT for a Rectangular Pulse,
Using the DFT to Compute the Fourier Series,
Example 2-17 Use the DFT to Compute the Spectrum of a Sinusoid,
2-9 Bandwidth of Signals
Example 2-18 Bandwidths for a BPSK Signal.
2-10 Summary
2-11 Study-Aid Examples
Problems
3 BASEBAND PULSE AND DIGITAL SIGNALING
3-1 Introduction
3-2 Pulse Amplitude Modulation
Natural Sampling (Gating),

<<数字与模拟通信系统(第5版)>>

Instantaneous Sampling (Flat-Top PAM). ,
 3-3 Pulse Code Modulation
 Sampling, Quanting, and Encoding,
 Practical PCM Circuits,
 Bandwidth of PCM,
 Effects of Nm_{se} ,
 Example 3-1 Design of a PCM System,
 Nonuniform Quantizing: μ -Law and A-Law Companding,
 3-4 Digital Signaling
 Vector Representation.
 Example 3-2 Vector Representation of a Binary Signal,
 Bandwidth Estimation,
 Binary Signaling,
 Example 3-3 Binary Signaling,
 Multilevel Signaling,
 Example 3-4 $L = 4$ Multilevel Signal,
 3-5 Line Codes and Spectra
 Binary Line Coding,
 Power Spectra for Binary Line Codes.
 Differential Coding,
 Eye Patterns,
 Regenerative Repeaters,
 Bit Synchronization,
 Power Spectra for Multilevel Signals.
 Spectral Efficiency,
 3-6 Intersymbol Interference
 Nyquist's First Method (Zero ISI),
 Raised Cosine-Rolloff Filtering,
 Example 3-1 (continued),
 Nyquist's Second and Third Methods for Control of ISI,
 3-7 Differential Pulse Code Modulation
 3-8 Delta Modulation
 Granular Noise and Slope Overload Noise,
 Example 3-5 Design of a DM System,
 Adaptive Delta Modulation and Continuously Variable Slope
 Delta Modulation,
 Speech Coding.
 3-9 Time-Division Multiplexing
 Frame Synchronization.
 Synchronous and Asynchronous Lines,
 Example 3-6 Design of a Time-Division Multiplexer,
 TDM Hierarchy.
 The TI PCM System,
 3-10 Pulse Time Modulation: Pulse Width Modulation
 and Pulse Position Modulation
 3-11 Summary
 3-12 Study-Aid Examples

<<数字与模拟通信系统(第5版)>>

Problems

4 BANDPASS SIGNALING PRINCIPLES AND CIRCUITS

4-1 Complex Envelope Representation of Bandpass Waveforms

Definitions: Baseband, Bandpass, and Modulation.

Complex Envelope Representation,

4-2 Representation of Modulated Signals

4-3 Spectrum of Bandpass Signals

4-4 Evaluation of Power

Example 4-1 Amplitude-Modulated Signal.

4-5 Bandpass Filtering and Linear Distortion

Equivalent Low-Pass Filter,

Unear Dislortion,

4-6 Bandpass Sampling Theorem

4-7 Received Signal Plus Noise

4-8 Classification of Filters and Amplifiers

Filters,

Amplifiers,

4-9 Nonlinear Distortion

4-10 Limiters

4-11 Mixers, Up Converters, and Down Converters

4-12 Frequency Multipliers

4-13 Detector Circuits

Envelope Detector.

Product Detector.

Frequency Modulation Detector,

4-14 Phase-Locked Loops and Frequency Synthesizers .

4-15 Direct Digital Synthesis

4-16 Transmitters and Receivers

Generalized Transmitters,

Generalized Receiver: The Superheterodyne Receiver,

Example 4-2 AM Broadcast Superheterodyne Receiver,

4-17 Summary

4-18 Study-Aid Examples

Problems

5 AM, FM, AND DIGITAL MODULATED SYSTEMS

5-1 Amplitude Modulation

Example 5-1 Power of an AM Signal,

5-2 AM Broadcast Technical Standards

5-3 Double-Sideband Suppressed Carrier

5-4 Costas Loop and Squaring Loop

5-5 Asymmetric Sideband Signals

Single Sideband. 304

Vestigial Sideband, 308

5-6 Phase Modulation and Frequency Modulation

Representation of PM and FM signals,

Spectra of Angle-Modulated Signals,

Example 5-2 Spectrum of a PM or FM Signal

<<数字与模拟通信系统(第5版)>>

with Sinusoidal Modulation,
Narrowband Angle Modulation,
Wideband Frequency Modulation,
Example 5-3 Spectrum for WBFM with Triangular Modulation,
Preemphasis and Deemphasis in Angle-Modulated Systems,
5-7 Frequency-Division Multiplexing and FM Stereo
5-8 FM and Noise Reduction Standards
FM Broadcast Technical Standards.
Dolby and DBX Noise Reduction Systems,
5-9 Binary Modulated Bandpass Signaling
On-Off Keying (OOK),
Binary-Phase Shift Keying (BPSK),
Differential Phase-Shift Keying (DPSK).
Frequency-Shift Keying (FSK),
Example 5-4 Spectrum of the Bell-Type 103 FSK Modem.
5-10 Multilevel Modulated Bandpass Signaling
Quadrature Phase-Shift (QPSK) Keying and M-ary Phase-Shift Keying (MPSK),
Quadrature Amplitude Modulation (QAM),
Power Spectral Density for MPSK and QAM.
5-11 Minimum-Shift Keying (MSK)
5-12 Spread Spectrum Systems
Direct Sequence,
Frequency Hopping,
5-13 Summary
5-14 Study-Aid Examples
Problems
6 RANDOM PROCESSES AND SPECTRAL ANALYSIS
6-1 Some Basic Definitions
Random Processes.
Stationarity and Ergodicity,
Example 6-1 First-Order Stationarity,
Example 6-2 Ergodic Random Process,
Correlation Functions and Wide-Sense Stationarity,
Complex Random Processes,
6-2 Power Spectral Density
Definition.
Wiener-Khinchin Theorem,
Properties of the PSD,
Example 6-3 Evaluation of the PSD for a Polar Baseband Signal,
General Formula for the PSD of Digital Signals,
White Noise Processes,
Measurement of PSD,
6-3 DC and RMS Values for Ergodic Random Processes
6-4 Linear Systems
Input-Output Relationships,
Example 6-4 Output Autocorrelation and PSD
for an RC Low-Pass Filter,

<<数字与模拟通信系统(第5版)>>

Example 6-5 Signal-to-Noise Ratio
at the Output of an RC Low-Pass Filter,
6-5 Bandwidth Measures
Equivalent Bandwidth,
Rms Bandwidth,
Example 6-6 Equivalent Bandwidth and Rms Bandwidth
for an RC LPF,
6-6 The Gaussian Random Process
Properties of Gaussian Processes,
Example 6-7 White Gaussian Noise Process,
6-7 Bandpass Processes
Bandpass Representations,
Properties of WSS Bandpass Processes,
Example 6-8 Spectra for the Quadrature Components
of White Bandpass Noise,
Example 6-9 PSD for a BPSK Signal.
Proofs of Some Properties,
Example 6-10 PDF for the Envelope and Phase Functions
of a Gaussian Bandpass Process,
6-8 Matched Filters
General Results.
Results for White Noise,
Example 6-11 Integrate-and-Dump (Matched) Filter,
Correlation Processing,
Example 6-12 Matched Filter for Detection of a BPSK Signal,
Transversal Matched Filter,
6-9 Summary
6-10 Appendix: Proof of Schwarz's Inequality
6-11 Study-Aid Examples
Problems
7 PERFORMANCE OF COMMUNICATION SYSTEMS
CORRUPTED BY NOISE
7-1 Error Probabilities for Binary Signaling
General Results,
Results for Gaussian Noise,
Results for White Gaussian Noise and Matched-Filter Reception,
Results for Colored Gaussian Noise and Matched-Filter Reception,
7-2 Performance of Baseband Binary Systems
Unipolar Signaling,
Polar Signaling,
Bipolar Signaling,
7-3 Coherent Detection of Bandpass Binary Signals
On-Off Keying,
Binary-Phase-Shift Keying,
Frequency-Shift Keying,
7-4 Noncoherent Detection of Bandpass Binary Signals
On-Off Keying,

<<数字与模拟通信系统(第5版)>>

Frequency-Shift Keying,
Differential Phase-Shift Keying,
7-5 Quadrature Phase-Shift Keying and Minimum-Shift Keying
7-6 Comparison of Digital Signaling Systems
Bit Error Rate and Bandwidth,
Synchronization,
7-7 Output Signal-to-Noise Ratio for PCM Systems
7-8 Output Signal-to-Noise Ratios for Analog Systems
Comparison with Baseband Systems,
AM Systems with Product Detection,
AM Systems with Envelope Detection,
DSB-SC Systems.
SSB Systems,
PM Systems,
FM Systems.
FM Systems with Threshold Extension,
FM Systems with Deemphasis,
7-9 Comparison of Analog Signaling Systems
Ideal System Performance,
7-10 Summary
7-11 Study-Aid Examples
Problems
8 CASE STUDIES OF COMMUNICATION SYSTEMS
8-1 Telecommunication Systems
Time-Division Multiplexing,
Frequency-Division Multiplexing,
8-2 Telephone Systems
Historical Basis,
Modem Telephone Systems and Remote Terminals
8-3 Integrated Service Digital Network
8-4 Capacities of Public Switched Telephone Networks
8-5 Satellite Communication Systems
Digital and Analog Television Transmission,
Data and Telephone Signal Multiple Access,
Example 8-1 Fixed Assigned Multiple-Access Mode Using
an FDMA Format,
Example 8-2 SPADE System,
Personal Communications via Satellite,
8-6 Link Budget Analysis
Signal Power Received,
Thermal Noise Sources,
Characterization of Noise Sources,
Noise Characterization of Linear Devices,
Example 8-3 T , and F for a Transmission Line,
Noise Characterization of Cascaded Linear Devices,
Link Budget Evaluation,
 E/N_0 Link Budget for Digital Systems,

<<数字与模拟通信系统(第5版)>>

Example 8-4 Link Budget Evaluation for a Television Receive-Only Terminal for Satellite Systems,

8-7 Fiber Optic Systems

Example 8-5 Link Budget for a Fiber Optic System,

8-8 Cellular Telephone Systems

8-9 Television

Black-and-White Television,

MTS Stereo Sound,

Color Television,

Standards for TV and CATV Systems,

HDTV,

8-10 Summary

8-11 Study-Aid Examples

Problems

A APPENDIX A MATHEMATICAL TECHNIQUES, IDENTITIES, AND TABLES

A-1 Trigonometry

Definitions,

Trigonometric Identities,

A-2 Differential Calculus

Definition.

Differentiation Rules,

Derivative Table,

A-3 Indeterminate Forms

A-4 Integral Calculus

Definition,

Integration Techniques,

A-5 Integral Tables

Indefinite Integrals.

Definite Integrals,

A-6 Series Expansions

Finite Series,

Infinite Series,

A-7 Hilbert Transform Pairs

A-8 The Dirac Delta Function

Properties of Dirac Delta Function,

A-9 Tabulation of $Sa(x) = (\sin x)/x$

A-10 Tabulation of $Q(z)$

B APPENDIX B PROBABILITY AND RANDOM VARIABLES

B-1 Introduction

B-2 Sets

B-3 Probability and Relative Frequency

Simple Probability,

Joint Probability.

Example B-1 Evaluation of Probabilities.

Example B-1 (Continued),

Conditional Probabilities,

<<数字与模拟通信系统(第5版)>>

Example B-1 (Continued).
B-4 Random Variables
Example B-1 Random Variable,
8-5 Cumulative Distribution Functions and Probability
Density Functions
Example 8-2 (Continued),
Properties of CDFs and PDFs.
Discrete and Continuous Distributions,
Example B-3 A Continuous Distribution,
Example B-3 (Continued).
8-6 Ensemble Average and Moments
Ensemble Average,
Example 8-4 Evaluation of an Average,
Moments. 647
8-7 Examples of Important Distributions
Binomial Distribution.
Poisson Distribution,
Uniform Distribution,
Gaussian Distribution,
Sinusoidal Distribution,
8-8 Functional Transformations of Random Variables
Example B-6 Sinusoidal Distribution,
Example B-6 PDF for the Output of a Diode Characteristic,
8-9 Multivariate Statistics
Multivariate CDFs and PDFs,
Bivariate Statistics.
Gaussian Bivariate Distribution.
Multivariate Functional Transformation,
Example B-7 PDF for the Sum of Two Random Variables,
Central Limit Theorem.
Example B-8 PDF for the Sum of Three Independent Uniformly
Distributed Random Variables,
Problems
APPENDIX C STANDARDS AND TERMINOLOGY
C FOR COMPUTER COMMUNICATIONS
C-1 Codes
Baudot,
ASCII,
C-2 DTE/DCE and Ethernet Interface Standards
Current Loop,
RS-232C, RS-422A, RS-449, and RS-530 Interfaces,
Centronics Parallel Interface,
IEEE-488 Interface,
Ethernet (IEEE 802.3) Interface,
C-3 The ISO OSI Network Model
C-4 Data Link Control Protocols
BISYNC,

<<数字与模拟通信系统(第5版)>>

SDLC,
HDLC.
CCITT X.25 Protocol,
Asynchronous Transfer Mode (ATM),
C-5 Modem Standards
C-6 Brief Computer Communications Glossary
REFERENCES
ANSWERS TO SELECTED PROBLEMS
INDEX
FRONT ENDPAPERS
Abbreviations
BACK ENDPAPERS
Fourier Transform Theorems
Fourier Transform Pairs
Q(z) Function
