<<操作系统>>

内容概要

本书介绍操作系统的实践和应用。

读者对象是使用（而非设计）计算机，操作系统和网络的人员。

只要求读者有适当的计算机基本概念，不要求有高深的数学知识和编程经验。

与以前几个版本相比，新版除在文字和内容上作了修改外，增加了不少新的内容，如：Windows 2000，Intel奔腾处理机体系结构，C / S网络结构，Novell Netware，Internet，UNIX/Linux等。

因此全书内容更和富，更加实用。

全书共分5个部分：I.复习基本计算机概念，起到填平补齐的作用；II.介绍操作系统的基本主要概念；III.用户和程序员与操作系统的通信，主要讨论用户接口、命令语言或作业控制语言，结合各种具体的操作系统讲解MS - DOS，Windows 2000，UNIX/Linux，IBM的MVS / JCL等；IV.结合机器内部，进一步讨论上述各种操作系统；V.讨论网络，网络操作系统，包括C / S网络操作系统，Novell Netware，Windows 2000服务器，Internet。

<<操作系统>>

书籍目录

Preface
1 Introduction and Overview
What Is an Operating System?
The Components of a Modern Operating System
A Look Ahead
Summary
Key Words
Exercises
PART 1: SYSTEM RESOURCES
2 Hardware
Memory
Physical Memory Devices
Bytes and Words
Addressing Memory
Cache Memory
The Processor
Program Instructions
The Processor's Components
Machine Cycles
Microsoft
Input and Output Devices
Secondary Storage
Diskette
Hard Disk
Backup
Other Secondary Media
The Directory
Linking the Components
Summary
Key Words
Exercises
3 Software and Data
Hardware, Software, and Data
Software
Absolute and Relative Addressing
Programming Languages
Traditional Structured Software
Object-Oriented Software
Libraries
Reentrant Code
Data
Data Elements
Data Structures
Data Files
The Relative Record Concept

<<操作系统>>

Access Techniques
Database Management
Summary
Key Words
Exercises
4 Linking the Components
Linking Internal Components
The Bus
Word Size
Machine Cycles
Architectures
Single-Bus Architecture
Interfaces
Channels and Control Units
Multiple-Bus Architecture
Logical and Physical I/O
Primitives
Open
Accessing Data
Networks
Messages and Signals
Network Types
Network Topology
Network Management
Summary
Key Words
Exercises
PART 2: BASIC OPERATING SYSTEM
CONCEPTS
5 The Shell, the IOCS, and the File System
An Operating System's Basic Functions
The User Interface
The Command Processor or Shell
The Command Language
Batch Commands
Device Management
The Input/Output Control System
Logical and Physical I/O
Interrupts and Device Synchronization
The File System
Loading a Program
Opening and Closing Data Files
Disk Space Management
The Boot
Utilities
Summary
Key Words

<<操作系统>>

Exercises

6 Memory Management and Processor Management

Memory Management

Resident and Transient Routines

Concurrency

Partitions and Regions

Segmentation

Paging

Segmentation and Paging

Memory Protection

Overlay Structures

Virtual Memory

Implementing Virtual Memory

Addressing Virtual Memory

Page Faults

Thrashing

Multiprogramming

The Dispatcher

Control Blocks

Interrupts

Time-Sharing

Roll-In/Roll-Out

Time-Slicing

Polling

Scheduling and Queuing

Spooling

Deadlock

Summary

Key Words

Exercises

PART 3: COMMUNICATING

WITH THE OPERATING SYSTEM

7 The User Interface

User Interface Functions

Types of User Interfaces

A Human Perspective

Learning a User Interface

Summary

Key Words

Exercises

8 MS-DOS Commands

MS-DOS

MS-DOS Commands

The Chapter Tutorial

Getting Started

Selecting the Default Drive

Formatting a Diskette

<<操作系统>>

The File System
File Names
Directories
Subdirectories
Path Names
Viewing a Directory
Creating Directories
Creating Files
Changing Directories
Manipulating Files
Batch Files
Program Files
Pipes, Filters, and Redirection
Returning to Windows
Summary
Key Words
Exercises
9 Windows 2000
Windows 2000
The User Interface
Getting Help
Executing a Program
Switching Between Programs
Maximizing and Minimizing a Window
The Menu Bar
Quitting a Program
Shutting Down
Working With the Windows File System
Formatting a Disk
File Names
Directories (or Folders)
The Windows Explorer
My Computer
Creating Directories
Creating Files
Copying and Renaming Files
Copying to a Different Folder
Copying Multiple Files
Copying Entire Subfolders
Manipulating Files
Searching for Files
Sorting Files
Shortcuts to Files
Deleting Files or Folders
Command Line Interface
Windows Scripting Host
Summary

<<操作系统>>

Key Words

Exercises

10 UNIX/Linux Commands and Utilities

UNIX

Linux

The UNIX Shell

The Chapter Tutorial

Logging On

The File System

File Names

Directories

Path Names

Viewing a Directory

Creating Directories

Changing Working Directories

Creating Files

Manipulating Files

Pipes, Filters, and Redirection

Shell Scripts

Other Useful Commands

Graphic User Interface

Summary

Key Words

Exercises

11 IBM OS/JCL: JOB and EXEC

Statements

Batch job Control Languages

OS/JCL

Jobs and Job Steps

Catalogued Procedures

JCL Statement Format

JOB Statements

Accounting Information

The Programmer Name

The CLASS Parameter

The TIME Parameter

The REGION Parameter

The MSGLEVEL Parameter

Defaults

Other JOB Parameters

Continuing a JCL Statement

EXEC Statements

The COND Parameter

Other EXEC Parameters

Summary

Key Words

Exercises

<<操作系统>>

12 IBM/OS JCL: DD Statements
External Device Linkage
Data Control Blocks
DD Statements
Unit Record Hardware
The UNIT Parameter
The DCB Parameter
Magnetic Disk
UNIT and DCB
The DISP Parameter
The DSNAMES Parameter
The VOLUME Parameter
The SPACE Parameter
Some Examples
Magnetic Tape
