

<<Malliavin随机变分引论>>

图书基本信息

书名：<<Malliavin随机变分引论>>

13位ISBN编号：9787302091813

10位ISBN编号：7302091811

出版时间：2005-1

出版时间：清华大学出版社

作者：方诗赞

页数：153

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## <<Malliavin随机变分引论>>

### 内容概要

Something about the author Dr. Shizan Fang(bom in 1963 ). Professor of University of Burgundy(Dijon. FranceS, obtained his PhD degree at University of Paris VI in February 1990 and then worked there as "maitre de Conferences" during 1990-1996. His main interests of research are in the field of "Analysis. Geometry and Probability". He has published some first rate results on the subjects "Geometric Analysis on the Wiener Space". "Geometric Stochastic Analysis on Riemannian Path Spaces and Loop Groups". "Stochastic Differential Equations and Flow of Homeomorphism". Abstract of the book Malliavin Calculus is the theory of infinite dimensional differential calculus, which is suitable for functionals involved in diffusion theory, stochastic control, financial market models, etc. It also provides infinite dimensional examples in Dirichlet forms theory, in Functional Inequalities Analysis, etc. The main purpose of this book is to give a foundation of Malliavin Calculus, as well as some insights toward further researches in the field of path and loop spaces.

书籍目录

1 Brownian motions and Wiener spaces 1.1 Gaussian family 1.2 Brownian motion 1.3 Classical Wiener spaces 1.4 Abstract Wiener spaces  
 2 Quasi-invariance of the Wiener measure 2.1 Convergence theorem for  $L^2$ -martingales 2.2 Cameron-Martin theorem 2.3 Girsanov theorem  
 3 Sobolev spaces over the Wiener space 3.1 Definitions and examples 3.2 Integration by parts 3.3 Sobolev spaces  $D_p^1(W)$  3.4 High order Sobolev spaces  
 4 Ornstein-Uhlenbeck operator 4.1 Definitions 4.2 The spectrum of  $L$  4.3 Vector valued Ornstein-Uhlenbeck operator  
 5 Existence of divergence:  $L^2$ -case 5.1 Energy identity 5.2 Weitzenböck formula 5.3  $\mathbb{Z}_2$  criterion  
 6 Ornstein-Uhlenbeck semi-group 6.1 Mehler formula 6.2 Hypercontractivity of  $P_t$  6.3 Some other properties of  $P_t$   
 7 Riesz transform on the Wiener space 7.1 Hilbert transform on the circle  $S^1$  7.2 Riesz transform on the Wiener space 7.3 Meyer inequalities  
 8 Existence of divergence:  $L^p$ -case 8.1 Meyer multipliers 8.2 Commutation formulae 8.3 Smoothness for  $(Z)$   
 9 Malliavin's density theorem 9.1 Non-degenerated functionals 9.2 Examples  
 10 Tangent processes and its applications 10.1 Tangent processes 10.2 Path space over a compact Lie group 10.3 Path space over a unimodular Lie group  
 Appendix: Stochastic differential equations  
 General notation  
 Notes and Comments  
 Bibliography  
 Index
