<<新编英语阅读速通>>

内容概要

全书由200篇文章组成，附有阅读技巧10篇和参考答案详解。
全书内容涉及地理、历史、人文环境、科技动态、文化风俗、时事新闻。
文章浅显易懂，练习体例丰富多样，便于读者和广大公民自学和自测自评。
本书确实做到了真正提高阅读和理解能力的速通。

<<新编英语阅读速通>>

作者简介

杨都林，1963年出生。

英语硕士学位。

北京理工大学珠海学院外语学院英语专业教研室主任，副教授。

章节摘录

An eight-year-old child heard her parents talking about her little brother. All she knew was that he was very sick and they had no money. Only a very expensive operation could save him now and there was no one to lend them the money. When she heard her daddy say to her tearful mother, "Only a miracle can save him now," the little girl went to her bedroom and pulled her money from its hiding place and counted it carefully. She hurried to a drugstore with the money in her hand.

"And what do you want?" asked the salesman. "It's for my little brother," the girl answered. "He's really, really sick and I want to buy a miracle." "Pardon?"

"said the salesman. "My brother Andrew has something bad growing inside his head and my daddy says only a miracle can save him. So how much does a miracle cost?"

"We don't sell a miracle here, child. I'm sorry," the salesman said with a smile. "Listen, if it isn't enough, I can try and get some more. Just tell me how much it costs." A well-dressed man heard it and asked, "What kind of a miracle does your brother need?"

"on a hillside and use telescopes to watch dinosaurs in order to know how they lived and whether they were good parents. Instead, they have to search hard for information from dinosaurs' fossils because dinosaurs died out millions of years ago. It's very difficult for the scientists to reach an agreement because different results can be got from the same fossils; many fossils of the same kind of dinosaurs have been dug out from one place. They might have formed when an entire group of dinosaurs got stuck all at once. Or they might have been the result of dinosaurs getting stuck one after another over a course of a few centuries. Then we can say that dinosaurs might have in the first case lived in big groups and in the second lived alone. Though there are two different results, dinosaur scientists now generally agree that at least some kinds of dinosaurs lived in big groups. "That's pretty much settled at this point." Says Paul Sereno, a kind of dinosaurs called Sauropods left behind tracks in the Western United States that appear to run north and south, suggesting that they even moved long distances together. As to whether dinosaurs cared for their young, dinosaur scientists have turned to the closest living relatives of dinosaurs — birds and crocodiles — for possible models. Birds give a lot of care to their young, while crocodiles just help their young to the water. The discovered fossils of dinosaurs sitting on their knees and staying with their young suggest the parents were taking care of their babies, but we still cannot say that all dinosaurs did the same. There is still a long way to go before the above questions could be answered. Dinosaur scientists will have to find more proof to reach an agreement.
