章节摘录

4 It eases the problem almost everyone has of developing a habit of backing up files. Jonathan Huberman , president of Iomega4 , understands the problem firsthand. Even though his company makes external hard drives , his wife , "a very smart businesswoman" , wasn't backing up her files. He learned that only when a big bush fire forced them to evacuate their San Diego house. 5 Backing up to an external hard drive doesn't help when your house burns or a strong wind tears off the roof. If your computer is destroyed , your hard drive , stored 10 feet away in a drawer , is probably gone too. 6 Even though a hard drive with a terabyte (or 1 , 000 gigabytes) of storage can hold thousands of photographs , songs and movies and costs less than \$100 , storing your files in a distant commercial data center , encrypted and secure , increasingly makes more sense. Cloud backups are appealing for another reason : as computers become more mobile , such as laptops , tablets and smartphones , 6 you need to have reliable access to the data anywhere over an Internet connection.
