<<相邻关系>>

内容概要

本书是一本关于反语的认知语用研究的专著，作者在系统地回顾了国内外相关研究后，意图建立一个描述反语使用认知过程的语用—认知模型，即“基于心理模型的反语工作机制”，并重点介绍了该模型中相邻关系的关键性作用。

全书共有7章，内容丰富，可供理论研究及教学、翻译实践等参考使用。

章节摘录

In Chapter 3 we attempted a mechanism of the use of irony. This chapter will revisit the mechanism. Irony is a particularly tricky trope in that the meaning of an obviously bland statement of fact under certain circumstances can be reversed to its opposite direction. Thus we can assume the use of irony is a complex process which arouses my interest to explore and formulate the rules governing this process. Based on the previous observations as well as on extensions of relevant theories, we described the framework of MM-based Pragmatic Reasoning in Chapter 3, which we intend as the basis to build up the mechanism underlying the use of irony (production and interpretation). MM-based Pragmatic Reasoning is an integrated model, which is in turn made up of two components, "autonomy - dependence alignment framework" and "explicit expression - implicit expression inference framework".
