

<<化学和工程热力学>>

图书基本信息

书名：<<化学和工程热力学>>

13位ISBN编号：9787502528201

10位ISBN编号：7502528202

出版时间：2002-8

出版时间：化学工业出版社

作者：桑德美

页数：772

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## 前言

This book is intended to be the text for a course in thermodynamics for undergraduate students in chemical engineering. It has been used in this manner at the University of Delaware for more than twenty years, originally as a course for third-year students and currently for sophomores. I had two objectives in writing the first edition of this book, which have been retained in the succeeding editions. The first was to develop a modern applied thermodynamics text especially for chemical engineering students, that was relevant to other parts of the curriculum, specifically courses in separations processes, chemical reactor analysis, and process design. The other objective was to organize and present material in sufficient detail, and in such a way that the student obtained a good understanding of the principles of thermodynamics, and a proficiency in applying these principles to the solution of a large variety of energy flow and equilibrium problems. Since the first two editions largely met these goals, and the principles of thermodynamics have not changed in the last decade, this edition is similar in structure to the earlier ones. However, there have been three important changes in engineering education in the recent decades. The first is the availability of powerful desktop computers. The second is greater concerns about safety and the environment. The third is the application of chemical engineering principles to new technology areas such as biotechnology, polymers, solid state processing, etc. In the current edition of this text I have made changes to address each of these issues. The availability of desktop computers and equation solving software has now made it possible to bring engineering science, industrial practice, and undergraduate education much closer together. In particular, students in their dormitory rooms or at home can now perform sophisticated thermodynamics and phase equilibrium calculations similar to those that they will encounter in industry. I provide two different ways to accomplish this.

## 内容概要

随着中国社会主义现代化建设进入新的阶段，以高质量的高等教育培养千百万专门人才，迎接新世纪的挑战，是实现“科教兴国”战略的基础工程，也是完成“十五”计划各项奋斗目标的重要保证。

为切实加强高等学校本科教学并提高教学质量，教育部于2001年专门下发文件提出12条意见，对高等学校教学工作从认识、管理、教师队伍到教学方法和教学手段等给予指导。

文件强调，按照“教育要面向现代化、面向世界、面向未来”的要求，为适应经济全球化和科技国际化的挑战，本科教育要创造条件使用英语等外语进行公共课和专业课教学。

在文件精神指导下，全国普通高等学校尤其是重点高校中兴起了使用国外教材开展教学活动的潮流。

如生物技术与工程、环境科学与工程、材料科学与工程及作为其学科基础理论重要组成部分的化学技术和化学工程技术又是这股潮流中最为活跃的领域之一。

在教育部“化工类专业人才培养方案及教学内容体系改革的研究与实践”项目组及“化工类专业创新人才培养模式、教学内容、教学方法和教学改革的研究与实践”项目组和“全国本科化学工程与工艺专业教学指导委员会”的指导和帮助下，化学工业出版社及时启动了引进国外名校名著的教材工程。

出版社组织编辑人员多次赴国外学习考察，通过国外出版研究机构对国外著名的高等学校进行调查研究，搜集了一大批国际知名院校的现用教材选题。

他们还联络国内重点高校的专家学者组建了“国外名校名著评价委员会”，对国外和国内高等本科教学进行比较研究，对教材内容质量进行审查评议，然后决定是否引进。

他们与国外许多著名的出版机构建立了联系，有的还建立了长期合作关系，以掌握世界范围内优秀教材的出版动态。

以其化学化工专业领域的优势资源为基础，化学工业出版社的教材引进主要涉及化学、化学工程与工艺、环境科学与工程、生物技术与工程、材料科学与工程、制药工程等专业，对过程装备与控制工程、自动化等传统专业教材的引进也在规划之中。

作者简介

作者：(美国)桑德美(Stanley I.Sandler)

## 书籍目录

NOTATION  
 CHAPTER INTRODUCTION  
 1.1 The Central Problems of Thermodynamics  
 1.2 A System of Units  
 1.3 The Equilibrium State  
 1.4 Pressure, Temperature, and Equilibrium  
 1.5 Heat, Work, and the Conservation of Energy  
 1.6 Specification of the Equilibrium State; Intensive and Extensive Variables; Equations of State  
 1.7 A Summary of Important Experimental Observations  
 1.8 A Comment on the Development of Thermodynamics  
 Problems  
 CHAPTER CONSERVATION OF MASS AND ENERGY  
 2.1 A General Balance Equation and Conserved Quantities  
 2.2 Conservation of Mass  
 2.3 Conservation of Energy  
 2.4 The Thermodynamic Properties of Matter  
 2.5 Applications of the Mass and Energy Balances  
 2.6 Conservation of Momentum  
 2.7 The Microscopic Equations of Change for Thermodynamics and Fluid Mechanics ( Optional )  
 Problems  
 CHAPTER ENTROPY: AN ADDITIONAL BALANCE EQUATION  
 3.1 Entropy: A New Concept  
 3.2 The Entropy Balance and Reversibility  
 3.3 Heat, Work, Engines, and Entropy  
 3.4 Entropy Changes of Matter  
 3.5 Applications of the Entropy Balance  
 3.6 Liquefaction  
 3.7 Power Generation and Refrigeration Cycles  
 3.8 The Thermodynamics of Mechanical Explosions  
 3.9 The Microscopic Entropy Balance ( Optional )  
 Problems  
 CHAPTER THE THERMODYNAMIC PROPERTIES OF REAL SUBSTANCES  
 4.1 Some Mathematical Preliminaries  
 4.2 The Evaluation of Thermodynamic Partial Derivatives  
 4.3 The Ideal Gas and Absolute-Temperature Scales  
 4.4 The Evaluation of Changes in the Thermodynamic Properties of Real Substances Accompanying a Change of State  
 4.5 An Example Involving the Change of State of a Real Gas  
 4.6 The Principle of Corresponding States  
 4.7 Generalized Equations of State  
 4.8 The Third Law of Thermodynamics  
 4.9 More About Thermodynamic Partial Derivatives ( Optional )  
 Appendix A  
 4.1 A Program for Thermodynamic Properties Calculations Using the Peng-Robinson Cubic Equation of State, PR1  
 Problems  
 CHAPTER 5 EQUILIBRIUM AND STABILITY IN ONE-COMPONENT SYSTEMS  
 5.1 The Criteria for Equilibrium  
 5.2 Stability of Thermodynamic Systems  
 5.3 Phase Equilibria: Application of the Equilibrium and Stability Criteria to the Equation of State  
 5.4 The Molar Gibbs Free Energy and Fugacity of a Pure Component  
 5.5 The Calculation of Pure Fluid-Phase Equilibrium: The Computation of Vapor Pressure from an Equation of State  
 5.6 The Specification of the Equilibrium Thermodynamic State of a System of Several Phases: The Gibbs Phase Rule for a One-Component System  
 5.7 Thermodynamic Properties of Phase Transitions  
 Problems  
 CHAPTER 6 THE THERMODYNAMICS OF MULTICOMPONENT MIXTURES  
 6.1 The Thermodynamic Description of Mixtures  
 6.2 The Partial Molar Gibbs Free Energy and the Generalized Gibbs-Duhem Equation  
 6.3 A Notation for Chemical Reactions  
 6.4 The Equations of Change for a Multicomponent System  
 6.5 The Heat of Reaction and a Convention for the Thermodynamic Properties of Reacting Mixtures  
 6.6 The Experimental Determination of the Partial Molar Volume and Enthalpy  
 6.7 Criteria for Phase Equilibrium in Multicomponent Systems  
 6.8 The Criteria for Chemical Equilibrium, and Combined Chemical and Phase Equilibrium  
 6.9 The Specification of the Equilibrium Thermodynamic State of a Multicomponent, Multiphase System; the Gibbs Phase Rule  
 6.10 Some Concluding Remarks  
 Problems  
 CHAPTER 7 THE ESTIMATION OF THE GIBBS FREE ENERGY AND FUGACITY OF A COMPONENT IN A MIXTURE  
 7.1 The Ideal Gas Mixture  
 7.2 The Partial Molar Gibbs Free Energy and Fugacity  
 7.3 The Ideal Mixture and Excess Mixture Properties  
 7.4 The Fugacity of Species in Gaseous, Liquid, and Solid Mixtures  
 7.5 Several Correlative Liquid Mixture ( Activity Coefficient ) Models  
 7.6 Two Predictive Activity Coefficient Models  
 7.7 A Corresponding States Principle for Mixtures; The Pseudocritical Constant Method  
 7.8 The Fugacity of Species in Nonsimple Mixtures  
 7.9 Some Comments on Reference and Standard States  
 7.10 A Combined Equation-of-State--Excess Gibbs Free Energy Models  
 7.11 Electrolyte Solutions  
 7.12 Concluding Remarks  
 Appendix A  
 7.1 A Statistical Mechanical Interpretation of the Entropy of Mixing in an Ideal Mixture  
 Appendix A  
 7.2 A Program for Multicomponent Vapor-Liquid Equilibrium Calculations Using the Peng-Robinson Cubic Equation of State, VLMU  
 Appendix A  
 7.3 Multicomponent Excess Gibbs Free Energy ( Activity Coefficient ) Models  
 Appendix A  
 7.4 A Program for the Prediction of Activity Coefficients and Low Pressure Vapor-Liquid Equilibrium Using the UNIFAC Model, UNIFAC.  
 Problems  
 CHAPTER 8 PHASE EQUILIBRIUM IN MIXTURES  
 CHAPTER 9 CHEMICAL EQUILIBRIUM AND THE BALANCE
