章节摘录

版权页:插图:A highway zigzagged from Linglong gold mines to Longkou Dock, by way of Zhaoyuan Countyand several villages of Huangxian County. It was connected with Yan (tai) Wei (fang) Road in the north and led to Qingdao in the south. The devils built along the highway a stronghold orblockhouse every couple of li or more than ten li to control and check this communications and transport line. This road is the only transportation artery through which the devils plunder and transport the gold resources of Linglong. Large amounts of gold and rich ore were shipped from Longkou Dock to Japan through this transport line. During over six years of the devils'occupation of Linglong, large amounts of our gold, silver, copper, sulphur and other resourceswere plundered and transported through this highway. At the same time, this highway separatedour west sea area from the north sea area and blocked the communication and liaison of our anti-Japanese army and people. In order to cut off this artery and break though the enemy's separation and blockade, our NorthSea Military Subarea organized a smart and efficient armed working team to work actively inthe broad rural areas along the highway to motivate the masses and launch struggles against theenemy. Meanwhile, our main force and local armed forces of Jiaodong often fought along thehighway to ambush the devils' transport motorcade and punish the invaders. From 1941 to thespring of 1944, our troops and people along the highway cooperated closely to frequently ambush the transport motorcade of the devils in Linglong gold mines in Shabu Village, HuishuVillage, Xiaolijia Village, Huangshanguan Village, Zhanghuashantou Village and other places. They blew up more than 30 enemy trucks, killed over 200 Japanese and puppet soldiers and captured large amounts of rich ore, refined gold ore and logistics, disturbing the enemy'sproduction plan and vigorously supporting the anti-plunder struggle of the workers and massesin Linglong mine area, and bridging the communication and liaison between the west sea areaand north sea area.
