<<第1届世界数学团体锦标赛>>

内容概要

The first World Mathematics Team Championship is inaugurated today. All the young Math lovers , Mathematical workers and distinguished guests will witness this meaningful event. From this time on , there will be a new member in the family of International Mathematics Competition. I'd like to introduce the idea of establishing this competition as follows. 1. Mathematics without Borders , it is the common cultural wealth of man-kind , learning math will benefit us for a Lifetime. 2. Children and youngsters are the future of the world. We should encourage them to study mathematics in the course of their growth. So there are three features of the World Mathematics Team Championship. 1. We encourage the competitors should give full play to their intelligence , and learn to cooperate with the others. 2. The competition can promote mutual understanding and communication between the young and help them establish friendship. 3. We should give a fair , positive and encouraging appraisal of each participating team and every participant. The three characteristics determine WMTC to be different from any other international mathematics competitions.
