作者简介

Erich Neumann contributed greatly to the field of developmental psychology and the psychology of consciousness and creativity. Neumann had a theoretical and philosophical approach to analysis, contrasting with the more clinical concern in England and the United States. His most valuable contribution to psychology was the empirical concept of "centroversion", a synthesis of extra- and introversion. However, he is best known for his theory of feminine development, a theory formulated in numerous publications, most notably *The Great Mother*. His works also elucidate the way mythology throughout history reveals aspects of the development of consciousness that are parallel in both the individual and society as a whole.
