

<<激光和电光学>>

图书基本信息

书名：<<激光和电光学>>

13位ISBN编号：9787506238731

10位ISBN编号：750623873X

出版时间：1998-8

出版时间：世界图书出版公司北京公司

作者：C.C.Davis

页数：720

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<激光和电光学>>

内容概要

This comprehensive textbook provides a detailed introduction to the basic physics and engineering aspects of lasers, as well as to the design and operational principles of a wide range of optical systems and electro-optic devices. Throughout, full details of important derivations and results are given, as are many practical examples of the design, construction, and performance characteristics of different types of lasers and electro-optic devices. The first half of the book deals with the fundamentals of laser physics, the characteristics of laser radiation, and discusses individual types of laser, including optically-pumped insulating crystal lasers, atomic gas lasers, molecular gas lasers, and semiconductor lasers. The second half deals with topics such as optical fibers, electro-optic and acousto-optic devices, the fundamentals of nonlinear optics, parametric processes, phase conjugation and optical bistability. The book concludes with chapters on optical detection, coherence theory, and the applications of lasers.

Covering a broad range of topics in modern optical physics and engineering, this book will be invaluable to those taking undergraduate courses in laser physics, optoelectronics, photonics, and optical engineering. It will also act as a useful reference for graduate students and researchers in these fields.

书籍目录

Preface 1 Spontaneous and Stimulated Transitions 1.1 Introduction 1.2 Why 'Quantum' Electronics? 1.3 Amplification at Optical Frequencies 1.4 The Relation Between Energy Density and Intensity 1.5 Intensity of a Beam of Electromagnetic Radiation in Terms of Photon Flux 1.6 Black-Body Radiation 1.7 Relation Between the Einstein A and B Coefficients 1.8 The Effect of Level Degeneracy 1.9 Ratio of Spontaneous and Stimulated Transition 1.10 Problems 2 Optical Frequency Amplifiers 2.1 Introduction 2.2 Homogeneous Line Broadening 2.4 Optical Frequency Amplification with a Homogeneously Broadened Transition 2.5 Optical Frequency Amplification with Inhomogeneous Broadening Included 2.6 Optical Frequency Oscillation - Saturation 2.7 Power Output from a Laser Amplifier 2.8 The Electron Oscillator Model of a Radiative Transition 2.9 What Are the Physical Significances of χ and χ' 2.10 The Classical Oscillator Explanation for Stimulated Emission 2.11 Problems Reference 3 Introduction to Two Practical Laser Systems 4 Passive Optical Resonators 5 Optical Resonators Containing Amplifying Media 6 Laser Radiation 7 Control of Laser Oscillators 8 Optically Pumped Solid-State Lasers 9 Gas Lasers 10 Molecular Gas Lasers 11 Molecular Gas Lasers 12 Tunable Lasers 13 Semiconductor Lasers 14 Analysis of Optical Systems 15 Analysis of Optical Systems 16 Optics of Gaussian Beams 17 Optical Fibers and Waveguides 18 Optics of Anisotropic Media 19 The Electro-Optic and Acousto-Optic Effects and Modulation of Light Beams 20 Introduction to Nonlinear Processes 21 Wave Propagation in Nonlinear Media 22 Detection of Optical Radiation 23 Coherence Theory 24 Laser Applications Appendix 1 Optical Terminology Appendix 2 The Function Appendix 3 Black-Body Radiation Formulas Appendix 4 RLC Circuit Appendix 5 Storage and Transport of Energy by Electromagnetic Fields Appendix 6 The Reflection and Refraction of a Plane Electromagnetic Wave at the Boundary Between Two Isotropic Media of Different Refractive Index Appendix 7 The Vector Differential Equation for Light Rays Appendix 8 Symmetry Properties of Crystals and the 32 Crystal Classes Appendix 9 Tensors Appendix 10 Bessel Function Relations Appendix 11 Green's Functions Appendix 12 Recommended Values of Some Physical Constants Index
