

<<统计物理学 (第2分册)>>

图书基本信息

书名：<<统计物理学 (第2分册)>>

13位ISBN编号：9787506242639

10位ISBN编号：750624263X

出版时间：1999-5

出版时间：世界图书出版公司

作者：E.M.Lifshitz/等

页数：387

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<统计物理学 (第2分册)>>

内容概要

As a brief characterization of its content, this ninth volume in the Course of Theoretical Physics may be said to deal with the quantum theory of the condensed state of matter. It opens with a detailed exposition of the theory of Bose and Fermi quantum liquids. This theory, set up by L. D. Landau following the experimental discoveries by P. L. Kapitza, is now an independent branch of theoretical physics. Its importance is in fact measured not so much by even the remarkable phenomena that occur in the liquid isotopes of helium as by the fact that the concepts of a quantum liquid and its spectrum are essentially the foundation for the quantum description of macroscopic bodies.
