

<<现代数学物理方法（第2卷）>>

图书基本信息

书名：<<现代数学物理方法（第2卷）>>

13位ISBN编号：9787506259323

10位ISBN编号：750625932X

出版时间：2003-6

出版时间：北京世界图书出版公司

作者：[ ]MichaelReed , [

页数：361

### 内容概要

This volume continues our series of texts devoted to functional analysis methods in mathematical physics. In Volume I we announced a table of contents for Volume II. However, in the preparation of the material it became clear that we would be unable to treat the subject matter in sufficient depth in one volume. Thus, the volume contains Chapters IX and X; we expect that a third volume will appear in the near future containing the rest of the material announced as "Analysis of Operators." We hope to continue this series with an additional volume on algebraic methods.

书籍目录

Preface Introduction Contents of Other Volumes IX: THE FOURIER TRANSFORM 1.  
 The Fourier transform on  $(\mathbb{R}^n)$  and  $\mathcal{C}'(\mathbb{R}^n)$ , convolutions 2. The range of the Fourier transform: Classical spaces 3.  
 The range of the Fourier transform: Analyticity 4.  $L^p$  Estimates 8a8c8ac888c888a8a8 Appendix Abstract interpolation  
 5. Fundamental solutions of partial differential equations with constant coefficients 6. Elliptic regularity 7.  
 The free Hamiltonian for nonrelativistic quantum mechanics 8. The Garding-Wightman axioms  
 Appendix Lorentz invariant measures 9. Restriction to submanifolds 10.  
 Products of distributions, wavefront sets, and oscillatory integrals Notes Problems 1  
 Reader's Guide X: SELF-ADJOINTNESS AND THE EXISTENCE OF DYNAMICS 1.  
 Extensions of symmetric operators Appendix Motion on a half-line, limit point-limit circle methods 2.  
 Perturbations of self-adjoint operators 3. Positivity and self-adjointness I: Quadratic forms 4.  
 Positivity and self-adjointness II: Pointwise positivity 5. The commutator theorem 6. Analytic vectors 7.  
 Free quantum fields Appendix The Weyl relations for the free field 8.  
 Semigroups and their generators 9. Hypercontractive semigroups 10. Graph Limits 11.  
 The Feynman-Kac formula 12. Time-dependent Hamiltonians 13. Classical nonlinear wave equations 14.  
 The Hilbert space approach to classical mechanics Notes Problems Reader's Guide List of Symbols Index
