

<<现代数学物理方法（第3卷）>>

图书基本信息

书名：<<现代数学物理方法（第3卷）>>

13位ISBN编号：9787506259330

10位ISBN编号：7506259338

出版时间：2003-6

出版时间：世界图书出版公司(此信息作废)

作者：M.Reed

页数：463

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

内容概要

In the preparation of this volume we were fortunate to receive advice from C. Berning, P. Deift, V. Enns, G. Hagedorn, J. Holder, T. Ikebe, M. Klaus, S. Kuroda, J. Morgan III, S. Pinault, J. Rauch, S. Ruijsenaars, and L. Smith. We are grateful to these individuals and others whose comments made this book better.

书籍目录

Preface Introduction Contents of Other Volumes XI: SCATTERING THEORY 1. An overview of scattering phenomena 2. Classical particle scattering 3. The basic principles of scattering in Hilbert space Appendix 1 Stationary phase methods Appendix 2 Trace ideal properties of $f(x)g(-i)$ Appendix 3 A general invariance principle for wave operators 4. Quantum scattering I: Two-body case 5. Quantum scattering II: N-body case 6. Quantum scattering III: Eigenfunction expansions Appendix Introduction to eigenfunction expansions by the auxiliary space method 7. Quantum scattering IV: Dispersion relations 8. Quantum scattering V: Central potentials A. Reduction of the S-matrix by symmetries B. The partial wave expansion and its convergence C. Phase shifts and their connection to the Schrodinger equation D. The variable phase equation E. Jost functions and Levinson's theorem F. Analyticity of the partial wave amplitude for generalized Yukawa potentials G. The Kohn variational principle Appendix 1 Legendre polynomials and spherical Bessel functions Appendix 2 Jost solutions for oscillatory potentials Appendix 3 Jost solutions and the fundamental problems of scattering theory 9. Long-range potentials 10. Optical and acoustical scattering I: Schrodinger operator methods Appendix Trace class properties of Green's functions 11. Optical and acoustical scattering II: The Lax-Phillips method Appendix The twisting trick 12. The linear Boltzmann equation 13. Nonlinear wave equations Appendix Conserved currents 14. Spin wave scattering 15. Quantum field scattering I: The external field 16. Quantum field scattering II: The Haag-Ruelle theory 17. Phase space analysis of scattering and spectral theory Appendix The RAGE theorem Notes Notes on scattering theory on C^* -algebras Problems

MATERIAL PREPRINTED FROM VOLUME IV XIII.6 The absence of singular continuous spectrum I: General theory XIII.7 The absence of singular continuous spectrum II: Smooth perturbations A. Weakly coupled quantum systems B. Positive commutators and repulsive potentials C. Local smoothness and wave operators for repulsive potentials XIII.8 The absence of singular continuous spectrum III: Weighted L^2 spaces Notes Problems
