

<<数论中的基本方法>>

图书基本信息

书名：<<数论中的基本方法>>

13位ISBN编号：9787506259569

10位ISBN编号：7506259567

出版时间：2003-6

出版时间：世界图书出版公司(此信息作废)

作者：M.B.Nathanson

页数：513

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<数论中的基本方法>>

内容概要

This second edition of "Categories Work" adds two new chapters on topics of active interest. One is on symmetric monoidal categories and braided monoidal categories and the coherence theorems for them--items of interest in their own right and also in view of their use in string theory in quantum field theory. The second new chapter describes 2-categories and the higher-dimensional categories that have recently come into prominence. In addition, the bibliography has been expanded to cover some of the many other recent advances concerning categories.

书籍目录

Preface Notation and conventions A First Course in Number Theory 1 Divisibility and Primes 1.1
 Division Algorithm 1.2 Greatest Common Divisors 1.3 The Euclidean Algorithm and Continued Fractions 1.4
 The Fundamental Theorem of Arithmetic 1.5 Euclid's Theorem and the Sieve of Eratosthenes 1.6
 A Linear Diophantine Equation 1.7 Notes 2 Congruences 2.1 The Ring of Congruence Classes 2.2
 Linear Congruences 2.3 The Euler Phi Function 2.4 Chinese Remainder Theorem 2.5
 Euler's Theorem and Fermat's Theorem 2.6 Pseudoprimes and Carmichael Numbers 2.7 Public Key Cryptography
 2.8 Notes 3 Primitive Roots and Quadratic Reciprocity 3.1 Polynomials and Primitive Roots 3.2
 Primitive Roots to Composite Moduli 3.3 Power Residues 3.4 Quadratic Residues 3.5 Quadratic Reciprocity Law
 3.6 Quadratic Residues to Composite Moduli 3.7 Notes 4 Fourier Analysis on Finite Abelian Groups 4.1
 The Structure of Finite Abelian Groups 4.2 Characters of Finite Abelian Groups 4.3 Elementary Fourier Analysis 4.4
 Poisson Summation 4.5 Trace Formulae on Finite Abelian Groups 4.6 Gauss Sums and Quadratic Reciprocity 4.7
 The Sign of the Gauss Sum 4.8 Notes 5 The abc Conjecture 5.1 Ideals and Radicals 5.2 Derivations 5.3
 Mason's Theorem 5.4 The abc Conjecture 5.5 The Congruence abc Conjecture 5.6 Notes
 Divisors and Primes in Multiplicative Number Theory 6 Arithmetic Functions 6.1 The Ring of Arithmetic Functions
 6.2 Mean Values of Arithmetic Functions 6.3 The Möbius Function 6.4 Multiplicative Functions 6.5
 The mean value of the Euler Phi Function 6.6 Notes 7 Divisor Functions 7.1 Divisors and Factorizations 7.2
 A Theorem of Ramanujan 7.3 Sums of Divisors 7.4 Sums and Differences of Products 7.5 Set of Multiples 7.6
 Abundant Numbers 7.7 Notes 8 Prime Numbers 8.1 Chebyshev's Theorems 8.2 Mertens's Theorems 8.3
 The Number of Prime Divisors of an Integer 8.4 Notes 9 The Prime Number Theorem 9.1
 Generalized Von Mangoldt Functions 9.2 Selberg's Formulae 9.3 The Elementary Proof 9.4
 Integers with k Prime Factors 9.5 Notes 10 Primes in Arithmetic Progressions 10.1 Dirichlet Characters 10.2
 Dirichlet L-Functions 10.3 Primes Modulo 4 10.4 The Nonvanishing of $L(1, \chi)$ 10.5 Notes
 Three Problems in Additive Number Theory 11 Waring's Problem 11.1 Sums of Powers 11.2 Stable Bases 11.3
 Shnirel'man's Theorem 11.4 Waring's Problem for Polynomials 11.5 Notes 12 Sums of Sequences of Polynomials
 12.1 Sums and Differences of Weighted Sets 12.2 Linear and Quadratic Equations 12.3
 An Upper Bound for Representations 12.4 Waring's Problem for Sequences of Polynomials 12.5 Notes 13
 Liouville's Identity 13.1 A Miraculous Formula 13.2 Prime Numbers and Quadratic Forms 13.3 A Ternary Form
 13.4 Proof of Liouville's Identity 13.5 Two Corollaries 13.6 Notes 14 Sums of an Even Number of Squares 14.1
 Summary of Results 14.2 A Recursion Formula 14.3 Sums of Two Squares 14.4 Sums of Four Squares 14.5
 Sums of Six Squares 14.6 Sums of Eight Squares 14.7 Sums of Ten Squares 14.8 Notes 15 Partition Asymptotics
 15.1 The Size of $p(n)$ 15.2 Partition Functions for Finite Sets 15.3 Upper and Lower Bounds for $\log p(n)$ 15.4 Notes
 16 An Inverse Theorem for Partitions 16.1 Density Determines Asymptotics 16.2 Asymptotics Determine Density
 16.3 Abelian and Tauberian Theorems 16.4 Notes References Index
