<<连续力学中的数学模型>>

图书基本信息

书名：<<连续力学中的数学模型>>

13位ISBN编号：9787506265607

10位ISBN编号：7506265605

出版时间：2003-9

出版时间：北京世图

作者：R.Temam,A.Miranville

页数：288

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<连续力学中的数学模型>>

内容概要

At a time when mathematical modeling is pervading many areas of science and master's degree programs in industrial mathematics are being initiated in many universities, this book is intended as an introduction to continuum mechanics and mathematical modeling. One of the aims of the book is to reduce the gap slightly between mathematics and this area of natural science - a gap that is usually due to the language barrier and to the differences in thinking and reasoning. This book is written in a style suitable for mathematicians and adapted to their training. We have tried to remain very close to physics and to mathematics at the same time by making, in particular, a clear separation between what is assumed and what is proved. As it is, the book may appeal as well to a broader audience, such as engineers who would like to have a different perspective on the field, relying less on physical intuition, and advanced researchers who would like an introduction to a field new to them.

书籍目录

IntroductionA Few Words About NotationsPART ONE. FUNDAMENTAL CONCEPTS IN CONTINUUM MECHANICS 1 Describing the Motion of a System: Geometry and Kinematics 1.1 Deformations 1.2 Motion and Its Observation Kinematics 1.3 Description of the Motion of a System: Eulerian and Lagrangian Derivatives 1.4 Velocity Field of a Rigid Body: Helicoidal Vector Fields 1.5 Differentiation of a Volume Integral Depending on a Parameter 2 The Fundamental Law of Dynamics 2.1 The Concept of Mass 2.2 Forces 2.3 The Fundamental Law of Dynamics and Its First Consequences 2.4 Application to Systems of Material Points and to Rigid Bodies 2.5 Galilean Frames: The Fundamental Law of Dynamics Expressed in a Non-Galilean Frame 3 The Cauchy Stress Tensor - Applications 3.1 Hypotheses on the Cohesion Forces 3.2 The Cauchy Stress Tensor 3.3 General Equations of Motion 3.4 Symmetry of the Stress Tensor 4 Real and Virtual Powers 4.1 Study of a System of Material Points 4.2 General Material Systems: Rigidifying Velocities 4.3 Virtual Power of the Cohesion Forces: The General Case 4.4 Real Power: The Kinetic Energy Theorem 5 Deformation Tensor, Deformation Rate Tensor,Constitutive Laws 5.1 Further Properties of Deformations 5.2 The Deformation Rate Tensor 5.3 Introduction to Rheology: The Constitutive Laws 6 Energy Equations and Shock Equations 6.1 Heat and Energy 6.2 Shocks and the Rankine-Hugoniot RelationsPART TWO. PHYSICS OF FLUIDS 7 General Properties of Newtonian Fluids 7.1 General Equations of Fluid Mechanics 7.2 Statics of Fluids 7.3 Remark on the Energy of a Fluid 8 Flows of Inviscid Fluids 8.1 GeneralTheorems 8.2 Plane Irrotational Flows 8.3 Transsonic Flows 8.4 Linear Acoustics 9 Viscous Fluids and Thermohydraulics 9.1 Equations of Viscous Incompressible Fluids 9.2 Simple Flows of Viscous Incompressible Fluids 9.3 Thermohydraulics 9.4 Equations in Nondimensional Form: Similarities 9.5 Notions of Stability and Turbulence 9.6 Notion of Boundary Layer 10 Magnetohydrodynamics and Inertial Confinement of Plasmas 10.1 The Maxwell Equations and Electromagnetism 10.2 Magnetohydrodynamics 10.3 The Tokamak Machine 11 Combustion 11.1 Equations for Mixtures of Fluids 11.2 Equations of Chemical Kinetics 11.3 The Equations of Combustion 11.4 Stefan-Maxwell Equations 11.5 A Simplified Problem: The Two-Species Model 12 Equations of the Atmosphere and of the Ocean 12.1 Preliminaries 12.2 Primitive Equations of the Atmosphere 12.3 Primitive Equations of the Ocean 12.4 Chemistry of the Atmosphere and the Ocean Appendix: The Differential Operators in Spherical CoordinatesPART THREE. SOLID MECHANICS 13 The General Equations of Linear Elasticity 13.1 Back to the Stress-Strain Law of Linear Elasticity: The Elasticity Coefficients of a Material 13.2 Boundary Value Problems in Linear Elasticity:The Linearization Principle 13.3 Other Equations 13.4 The Limit of Elasticity Criteria 14 Classical Problems of Elastostatics 14.1 Longitudinal Traction-Compression of a Cylindrical Bar 14.2 Uniform Compression of an Arbitrary Body……15 Energy Theorems - Duality: Variational Formulations16 Introduction to Nonlinear Constitutive Laws and to Homogenization17 Linear Wave Equations in Mechanics18 The Soliton Equation: The Korteweg-de Vries Equation19 The Nonlinear Schrodinger EquationAppendix The Partial Differential Equations of MechanicsReferencesIndex
