

<<代数数论>>

图书基本信息

书名：<<代数数论>>

13位ISBN编号：9787506265621

10位ISBN编号：7506265621

出版时间：2003-11

出版时间：世界图书出版公司(此信息作废)

作者：Serge Lang

页数：357

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## &lt;&lt;代数数论&gt;&gt;

## 内容概要

The present book gives an exposition of the classical basic algebraic and analytic number theory and supersedes my Algebraic Numbers, including much more material, e.g. the class field theory on which I make further comments at the appropriate place later. For different points of view, the reader is encouraged to read the collection of papers from the Brighton Symposium (edited by Cassels-Frohlich), the Artin-Tate notes on class field theory, Weil's book on Basic Number Theory, Borevich-Shafarevich's Number Theory, and also older books like those of Weber, Hasse, Hecke, and HUBert's Zahlbericht. It seems that over the years, everything that has been done has proved useful, theoretically or as examples, for the further development of the theory. Old, and seemingly isolated special cases have continuously acquired renewed significance, often after half a century or more.

<<代数数论>>

书籍目录

Part One General Basic Theory

CHAPTER I Algebraic Integers

1. Localization 2. Integral closure

3. Prime ideals 4. Chinese remainder theorem 5. Galois extensions 6. Dedekind rings 7. Discrete valuation rings 8. Explicit factorization of a prime 9. Projective modules over Dedekind rings

CHAPTER II Completions

1. Definitions and completions 2. Polynomials in complete fields

3. Some filtrations 4. Unramified extensions 5. Tamely ramified extensions

CHAPTER IV Cyclotomic Fields

1. Roots of unity 2. Quadratic fields 3. Gauss sums 4. Relations in ideal classes

CHAPTER V Parallelotopes

1. The product formula 2. Lattice points in parallelotopes 3. A volume computation 4. Minkowski's constant

CHAPTER VI The Ideal Function

1. Generalized ideal classes 2. Lattice points in homogeneously expanding domains 3. The number of ideals in a given class

CHAPTER VII Ideles and Adeles

1. Restricted direct products 2. Adeles 3. Ideles 4. Generalized ideal class groups; relations with idele classes 5. Embedding of  $k^*$  in the idele classes 6. Galois operation on ideles and idele classes

CHAPTER VIII Elementary Properties of the Zeta Function and L-series

1. Lemmas on Dirichlet series 2. Zeta function of a number field 3. The L-series 4. Density of primes in arithmetic progressions 5. Fermat's finiteness theorem

Part Two Class Field Theory

Part Three Analytic Theory

Bibliography
