

<<固态物理学>>

图书基本信息

书名：<<固态物理学>>

13位ISBN编号：9787506273053

10位ISBN编号：7506273055

出版时间：2006-12

出版时间：北京世图

作者：格罗素

<<固态物理学>>

内容概要

固体物理学是一个一直蓬勃发展着的物理学分支，新理论和新现象不断涌现，人们期望新的教科书能够体现固体物理学研究前沿的最新进展。

本书在介绍了对固体的几何描述和晶体电子结构以后，对绝热原理和晶格振动，固体中的散射与输运行为，磁学和超导电性等内容进行了详细的剖析。

本书内容丰富，且体现了理论与实验兼顾、基础原理与细节的前沿进展兼顾的原则，可作为物理学领域的研究生专业课教科书和研究人员参考书。

书籍目录

Preface Chapter Electrons in one-dimensional periodic potentials 1 The Bloch theorem for one-dimensional periodicity 2 Energy levels in a periodic array of quantum wells 3 Electron tunneling and energy bands 3.1 Transmission and reflection of electrons through an arbitrary potential. 3.2 Electron tunneling through a periodic potential 4 The tight-binding approximation 4.1 Expansion in localized orbitals 4.2 Tridiagonal matrices and continued fractions 5 Plane waves and nearly free-electron approximation 5.1 Expansion in plane waves 5.2 The Mathieu potential and the continued fraction solution 6 Some dynamical aspects of electrons in band theory Further reading Chapter Geometrical description of crystals: direct and reciprocal lattices 1 Simple lattices and composite lattices 1.1 Periodicity and Bravais lattices 1.2 Simple and composite crystal structures 2 Geometrical description of some crystal structures 3 Wigner-Seitz primitive cells 4 Reciprocal lattices 4.1 Definitions and basic properties 4.2 Planes and directions in Bravais lattices 6 Translational symmetry and quantum mechanical aspects 6.1 Translational symmetry and Bloch wavefunctions 6.2 The parametric $k \cdot p$ Hamiltonian 6.3 Cyclic boundary conditions 6.4 Special k points for averaging over the Brillouin zone 7 Density-of-states and critical points Further reading Chapter The Sommerfeld free-electron theory of metals 1 Quantum theory of the free-electron gas 2 Fermi-Dirac distribution function and chemical potential 3 Electronic specific heat in metals and thermodynamic functions 4 Thermionic emission from metals Appendix A. Outline of statistical physics and thermodynamic relations A1. Microcanonical ensemble and thermodynamic quantities A2. Canonical ensemble and thermodynamic quantities A3. Grand canonical ensemble and thermodynamic quantities Appendix B. Fermi Dirac and Bose-Einstein statistics for independent particles Appendix C. Modified Fermi-Dirac statistics in a model of correlation effects Further reading Chapter The one-electron approximation and beyond 1 Introductory remarks on the many-electron problem 2 The Hartree equations 3 Identical particles and determinantal wavefunctions 4 Matrix elements between determinantal states 5 The Hartree-Fock equations 5.1 Variational approach and Hartree-Fock equations 5.2 Ground-state energy, ionization energies and transition energies 5.3 Hartree-Fock equations and transition energies in closed-shell systems 5.4 Hartree-Fock-Slater and Hartree-Fock Roothaan approximations 6 Overview of approaches beyond the one-electron approximation 7 Electronic properties and phase diagram of the homogeneous electron gas 8 The density functional theory and the Kohn-Sham equations Appendix A. Bi-electronic integrals along spin-orbitals Appendix B. Outline of second quantization formalism for identical fermions Appendix C. An integral on the Fermi sphere Further reading Chapter Band theory of crystals 1 Basic assumptions of the band theory. 2 The tight-binding method (LCAO method) 2.1 Description of the method for simple lattices 2.2 Description of the tight-binding method for composite lattices 2.3 Illustrative applications of the tight-binding scheme 3 The orthogonalized plane wave (OPW) method 4 The pseudopotential method 5 The cellular method 6 The augmented plane wave (APW) method Chapter Electronic Properties of selected crystals Chapter Excitons, plasmons and dielectric screening in crystals Chapter Interacting electronic-nuclear systems and the adiabatic principle Chapter Lattice dynamics of crystals Chapter Scattering of particles by crystals Chapter Optical and transport properties in metals Chapter Optical properties of semiconductors and insulators Chapter Transport in intrinsic and homogeneously doped semiconductors Chapter Transport in inhomogeneous semiconductors Chapter Magnetic properties of localized systems and Kondo impurities Chapter Magnetic ordering in crystals Chapter Superconductivity Subject index
