### 内容概要

The goal of this book is to present local class field theory from the cohomological point of view, following the method inaugurated by Hochschild and developed by Artin-Tate. This theory is about extensions--primarily abelian--of "local" (i.e., complete for a discrete valuation) fields with finite residue field. For example, such fields are obtained by completing an algebraic number field; that is one of the aspects of "localisation". The chapters are grouped in "parts". There are three preliminary parts: the first two on the general theory of local fields, the third on group cohomology. Local class field theory, strictly speaking, does not appear until the fourth part.

#### 书籍目录

Introduction Leitfaden Part One LOCAL FIELDS (BASIC FACTS) Part one LOCAL FIELDS (BASIC FACTS) Chapter I Discrete Valuation Rings and Dedekind Domains 1. Definition of Discrete Valuation Ring 2. Characterisations of Discrete Valuation Rings 4. Extensions 5. The 3. De&kind Domains Norm and Inclusion Homomorphisms 6. Example: Simple Extensions 7. Galois Extensions Frobenius Substitution Chapter II Completion 1. Absolute Values and the Topology Defined by a Discrete 2. Extensions of a Complete Field 3. Extension and Completion 4. Strupture of complete Valuation discrecte valuation rings I:Equal characteristic case 5. Structure of complete discrete valuation rings II:Unequal ..... Chapter IV Ramification Groups Chapter V The Norm characteristic case 6. Witt vectors VI Artin RepresentationPart Three GROUP COHOMOLOGY Chapter VII Basic Facts Appendix Non-abelian Cohomology Chapter VIII Cohomology of Finite Groups Chapter IX Theorems of Tate and Chapter X Galois Cohomology Chapter Xi Class FormationsPart Four LOCAL CALSS FIELD Chapter XII Brauer group of a local field Chapter XIII Local class field theory Chapter XIV Local THEORY symbols and Existence TheoremAppendix The global case Chater XV Ramification BibliographySupplementary Bibliography for the English Edition
