

<<第十二届国际羊毛会议论文集>>

图书基本信息

书名：<<第十二届国际羊毛会议论文集>>

13位ISBN编号：9787506468329

10位ISBN编号：7506468328

出版时间：1970-1

出版时间：东华大学组织 中国纺织出版社 (2010-09出版)

作者：东华大学组织 编

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<第十二届国际羊毛会议论文集>>

前言

The 12th International Wool Research Conference (IWRC 2010) is organized by the National Engineering Research Center for Dyeing and Finishing of Textiles, Donghua University, and is held on 19th- 22nd October, 2010, in Shanghai, China. The International Wool Research Conference has gone through a glorious history for 55 years. In 1955, the first conference was held in Melbourne, Australia. There have been held 11 conferences up to now at 5 yearly intervals, which were hosted in Melbourne-Australia (1955) , Harrogate-UK (1960) , Paris-France (1965) , Berkeley-California, USA (1970) , Aachen-Germany (1975) , Pretoria-South Africa (1980) , Tokyo-Japan (1985) , Christchurch-NZ (1990) , Biella-Italy (1995) , Aachen-Germany (2000) and Leeds-UK (2005) . It is clearly that the conference has fulfilled all the ideals and expectations of its founders. It is a first class forum for the dissemination of latest research results both in terms of the presentation materials and in terms of informal interactions and it has become a wool textile international event with an enduring tradition and profound effect worldwide. Scholarships have been continued to be made available to encourage the participation of young scientists from around the world who focus on the research of wool textile field.

书籍目录

Volume I 目录 : Section A: Wool Structure, Raw Wool Processing Development and Utilization of Animal Wool Fibers YAO Mu, CHEN Meiyu, SUN Runjun, LAI Kan, YAO Hua Developing "Eco-wool" Compliant Supply Chains for Australian Wool CAI Jackie, RUSSELL Ian, PIERLOT Anthony Advances in Wool Carpet Technology INGHAM Peter, MEADE Warren, McNEIL Steven Wool Production, Processing and Use - Environmental Aspects RUSSELL Ian Preserving Wool Fibre Quality - Principle for Processing Australian Superfine Wool JIANG Shouren Identification of Marker Peptides in Fine Animal Hair for Discrimination with Regard to Species and Breed KOERNER Andrea, SAREIAN Shiva, ELBERS Gereon, HENKEL Corinna, MOELLER Martin Improvements on Bleaching Process of Human Hair Produced by Stretching-Setting Treatment LIN Lin, LI Rong Effect of Stretching-Setting Treatment on Dyeing Behavior of Wool LIN Lin, LI Rong Effect of Fiber Morphology and Dimensions on Fuzzing and Pilling of Wool Knitted Fabrics WAN Ailan, YU Weidong Effect of the Stretching Speed on Slenderized Wool by Stretching YAO Jiangwei, YU Weidong Thermal Denaturation Behavior of IFs/IFAP Structures in Merino Wool in a HPDSC under Conditions of Intermediate KYOHEI Joko Digitization Reformation of Control System of Wool Carding Machine WANG ShuaL MA Chongqi LIU Rongxing Study on the Antibacterial Properties of Superfine Wool Powder Part I: Experiment ZHANG Hongjie, ZHONG Zhili, FENG Lili, WANG Xungai Impact of the Morphological Characteristics of Fibre on Pilling of Wool Fabrics WANG Ting, YU Weidong Research on Slenderizing Wool Fiber by NaOH/Glycol Solution GUO Jing, LI Jiaxuan Study on Wool Refining with Agents ZTANG Wei, YU Hongqin Cuticle Modifications and Dyeing Property of Ultrasonically Scoured Wool LI Qing, HURREN Christopher J., WANG Xungai Microstructures of Tibetan Yak Hair Using SEM and AFM ZUO Qiu, CHEN Wuyong, ZHANG Tao Preparation of Sheep Fur Treated with Silver Nanoparticles WANG Xuan, YANG Weite, LI hui, CHEN Wuyong..... Section B Section C Volume II 目录 : Section C: Textile Chemistry / Dyeing and Finishing Technology Coloring Matching of Natural Food Pigment Wool Dyeing Research ZHU Xia, MENG Qingtao Preparation and Application of Polymer Microemulsion as Binder for Pigment Printing on Fabrics MIN.lie, LI Jianli Dyeing Properties of Prodigiosin Pigment PAN Hong, ZHAO Tao, ZHONG Mianguo Preparation of Chitosan and Its Application on Silk Fabric Dyeing with Mugwort Extraction Jid Yanmei Dyeability of Cotton Treated with Silk Peptide Dyed With Black Tea Dyestuff JIA Yanmei, JI Yaohao, Meng Xiao Study on Hydrophobic-Modified Poly(ethylene terephthalate) by Copolymerization and Blends JIN Jian, WANG Xue, XIAO Changfa Recent Advances in Biotechnology and Wool Research CHENG Wenhong, ZHOU Qicheng Research on Improving the Wet Fastness of Reactive Dyes for Wool Dyeing ZHANG Qingfu, YANG Wenfang, NIU Jiarong Organic-Inorganic Coagulant for Treatment of Desizing Wastewater DU Juan, DING Liying, LUO Yan, ZHONG Iq, WANG Jiaoning, LUO Zhijie Application of Rare Earth Complexes in the Dyeing of Cotton/Wool Blends CHEN Zhixiang, QIAN Junnan, YAN Kelu Surface Characterization of Polytetrafluoroethylene Films Treated with Atmospheric Pressure Plasma CHEN Kui, GAO ,ling, YU Jianyong, DIdO Ying, XU Jinzhou Surface Grafting Polymerization and Modification on Poly(tetrafluoroethylene) Films by Means of Plasma Treatment CHEN Kui, GAO Jing, YU Jianyong, XU Tiangui, MA Ftzi The Deodorant and Antimicrobial Activities of Wool Fabrics Treated with 13-cyclodextrin and Chitosan HU Chunyan, LIU Dongliang, WANG Li, YAN Kelu Influence of IOB Value on Release and Dyeing Properties of Microencapsulated Disperse Dyes LUO Yah, QI Yi, ZTANG Yi, DU Juan Key Factors for Blended Polysulfone / Wool Yarn WEI Yiwen, WANG Yongming, ZTANG Zhenhu Section D: Environmental Treatment and the Reclamation of Wastes, Hair Cosmetic Chemistry and Fine Chemicals, Leather Science and Engineering Cu²⁺ Uptake Mechanism of Feather Fibre Based on Spectroscopy LU Lu, WANG Hong, KE Qinfei, JIN Xiangyu..... Section E Section F

章节摘录

插图：Native proteases tend to hydrolyse the inner part of wool through cell membrane complex (CMC) [1-3], so wool anti-felting researchers focused on the problem of protease non-surface hydrolysis in recent years. In 2005, W. H. Cheng [4] first proposed a genetic modification method in PhD thesis: there were two kinds of bonds in wool cuticle, peptide bonds and disulfide bonds. It was the rich disulfide bonds that prevented native protease to hydrolyse wool cuticle. Cheng's opinion was to combine protease and protein disulfide isomerase or thioredoxin together genetically to get a chimeric multifunctional enzyme, this chimeric enzyme was expected to catalyse the hydrolysis of peptide bonds and disulfide bonds both. It was a pity that there was no soluble and active recombinant enzyme (fusion of DNA sequence coding for papain and thioredoxin) in Cheng's post Ph.D. work (data not published). In 2008, Amujo R. et al [5] genetically modified subtilisin E, they increased its molecular weight to be 3-5 fold as the native protease. The results were not promising either. Fortunately, in 2009, Araujo R. et al [6] successfully constructed a novel high molecular weight subtilisin, based on the fusion of the DNA sequences coding for *Bacillus subtilis* prosubtilisin E and for an elastin-like polymer. The resulting fusion protein was biologically produced in *Escherichia coli*, purified and used for wool finishing assays. When compared to the commercial protease Esperase, the recombinant subtilisin E-VPAVG (220) activity was restricted to the cuticle of wool, allowing a significant reduction of pilling, weight loss and tensile strength loss of wool fibers. That was, for the first time, the microbial production of a functionalized high molecular weight protease for controlled enzymatic hydrolysis of wool surface.
