<<中国西藏的自然保护区>>

内容概要

As the body of the Qinghai-Tibet Plateau, Tibet is known as the "roof of the world" and "the third polar region of the world". It is not only the activating area of the climate in the eastern hemisphere and an important agent for climate adjustment in China and even the entire world, but also the origin of the rivers and the ecology of China and South Asia.

<<中国西藏的自然保护区>>
