## &lt;&lt;绿色中国&gt;&gt;

## 内容概要

Green China, as well as this particular work, developed from a recognition that China was tackling a wide range of serious environmental problems within the context of her rapid industrialization, urbanization, transition to a market-oriented economy and growing consumerism that would inevitably have great impact not only on the lives of its own vast population, but also for those inhabiting neighboring countries and even the world at large. The problems have been well documented in the Western media, but the solutions being tried have perhaps not been so well publicized, and this book is an attempt to redress the balance. Instead of lack of respect for Nature, enhanced environmental education ensures that there is resurgence in respect for the power and beauty of China's environment. There is a renewed quest for exemplars, of models of good practice in human/environment interaction, a quest that has several dimensions. And so, one dimension of such a quest is the historical one, seeking examples of ecological harmony in past practice. A cheerful future is one in which the ills of deforestation, soil erosion, water pollution, air pollution and the like are effectively tackled via a concerted effort across the country. Officials and cadres provide a key leadership role, but there is realization that local people must have a major role in combating environmental destruction. Participation and involvement will be crucial. It is likely that the energies and drive of young people will have to be mobilized, as it has been for a number of environmental campaigns such as those concerned with forestation. But all those involved will need to ensure that there is not a false concern to meet arbitrary short-term targets, but instead a genuine desire to improve the local, regional and national environment via long term efforts. This will not be a 'quick fix'; instead it will be an arduous and hard road, but one in which people gain from a sense of working hard together towards a better future.

## 书籍目录

Preface  
Section One Roots of China's Environmental Concerns  
Chapter 1 Introduction  
Achievements So Far  
Whose Responsibility?  
Chapter 2 China's varied environment  
Seven Physical Regions  
Chapter 3 Historical  
Preconditions  
Twin Threats: Drought and Flood  
Impact of Han Migrations  
Chapter 4 Socialist  
Transformations  
Mixed Results in the Countryside  
Section Two Air Pollution  
Chapter 5 Industrial  
Pollution  
Shougang and Benxi: Models for Change  
Township and Village Enterprises  
Chapter 6 Coal and Its  
Alternatives  
Leading Coal Consumer  
Nuclear and Natural Gas Alternatives  
Chapter 7 Gridlock and Smog  
The Bane of Traffic Jams  
Exhaust Emission Fears  
Countermeasures on Many Fronts  
Section Three Water Issues  
Chapter 8  
Pollution of Waterways  
Tackling Domestic Wastewater  
Saving the Lakes  
Red Tide Threat  
Chapter 9 Sharing Limited  
Water  
Diverting Water from South to North  
Yellow River's Future in Doubt  
Alternative Scenarios  
Seawater Option  
Chapter 10 The Three Gorges Dam  
Positive Points  
Negative Points  
Section Four Waste Disposal  
Chapter 11  
Consumer Society and Its Waste  
Pros and Cons of Urbanization  
Growth of Consumerism  
Chapter 12 Leveling the  
Waste Mountain  
Cities under Siege  
Still a Long Way to Go  
Section Five Land Loss and Recovery  
Chapter 13  
Greening the Deserts  
Promoting Public Involvement  
Chapter 14 Nature Reserves  
Tibetan Example of Nature  
First  
Pastureland and Forestry Protection  
Section Six Summing up  
Chapter 15 Bleak Futures, Cheerful Futures  
Bleak Scenario  
Optimistic Scenario  
Final Word  
Postscript  
Appendix  
Index
