章节摘录

版权页：插图： China is rich in land resources,with varieties of land formation in use.They include 951,000 square km of cultivated fields,or 10 percent of the totalland area,distributed mainly in northeast and north China,the middle andlower reaches of the Yangtze River,Sichuan Basin,and Pearl River Delta.These plains are known for their well-developed agriculture,and abound inwheat,maize,rice and various kinds of economic crops. China's grasslands cover an area of 4 million square km,or 41.6 percentof the total national land area.The bulk are found on the Inner Mongolia Plateau,Loess Plateau,areas south and north of the Tianshan Mountains in Xinjiang,and the Qinghai-Tibet Plateau. China is one of the few countries in the world rich in mineral ore re-sources in wide variety. China is rich in animal and plant resources.There are 32,800 species ofhigher plants and 104,000 species of animals in the country.Many are rarespecies,including pandas,golden monkeys,Chinese alligators,metasequoiaand dove trees,which are often called "living fossils".A number of naturereserves have been set up for their protection.
