<<青藏铁路通到拉萨>>

前言

Contemporary American travel writer Paul heroux commented that the "Kunlun Range s a guarantee that the railway will never get toLhasa... " in his Riding the Iron Rooster. The Qinghai-Tibet Railway, a plateau railway boastingthe highest elevation and longest distance in the world,did go beyond the Kunlun Range. It was completed onJuly i, 2006, amazing the whole world and creating apioneering work in railway construction historyThe construction of the railway took fifty years fromthe first survey in 1956 to completion in 2006. Overthe tedious half-century several generations of railwayworkers challenged extreme conditions finally to solvethree major global engineering problems: permafrost,alpine hypoxia and vulnerable ecologyIt is a road of civilization, traversing 55okm-plus low-latitude, high-elevation, permafrost regions, cuttingthrough Hoh Xil Depopulated Zone and beyond the5,072m-elevation pass of Tanggula Mountains.

内容概要

《青藏铁路通到拉萨(英文版)》内容简介：Contemporary American travel writer Paul heroux commented that the "Kunlun Range s a guarantee that the railway will never get toLhasa... " in his Riding the Iron Rooster. The Qinghai-Tibet Railway, a plateau railway boasting the highest elevation and longest distance in the world, did go beyond the Kunlun Range. It was completed on July i, zoo6, amazing the whole world and creating a pioneering work in railway construction history. The construction of the railway took fifty years from the first survey in 1956 to completion in 2006. Over the tedious half-century several generations of railway workers challenged extreme conditions finally to solve three major global engineering problems: permafrost, alpine hypoxia and vulnerable ecology. It is a road of civilization, traversing 550km-plus low-latitude, high-elevation, permafrost regions, cutting through Hoh Xil Depopulated Zone and beyond the 5,072m-elevation pass of Tanggula Mountains.

书籍目录

Preface I A Millennium-long Dream of the Snow-covered Plateau 3
The Ancient Tang-Tibet Road 5
Plateau Post Road 9
The Roads to Tibet 12
Call for a Railway 17
II Beyond the Roof of the World 21
After Two Times of Advancement, Phase 1 Opened for Traffic 22
Decision Comparison: It's Time for Building the Qinghai-Tibet Railway 32
Railway Laid to Tibet after Five Years of Construction 36
III Through the Permafrost Regions 53
Frozen Earth: a Lethal Killer 54
Innovative Design Thinking of the Three Changes 58
Take Proper Measures to Conduct Comprehensive Management 62
Roadbed in the Permafrost Regions Remains Stable and Withstands Challenges 70
IV Challenge Alpine Hypoxia 73
Health is the Priority 74
The Three-level Medical Treatment Network 80
Quality Food and Sleep for Employees 84
Aim: Zero Deaths from High Altitude Diseases 88
V Pave a "Green Sky Road" 91
Enforcing Environmental Protection by Law, Giving Priority to Prevention and Protection 92
Bottom-up Environmental Protection Achievement in both Construction and Environmental Protection 97
Environmental Protection with Science and Technology tressing both Exploitation and Protection 101
VI A "Golden Bridge" to Wealth and ivilization 111
Expedite Railways Extend and Wind on the Plateau 113
Tibet Enters into the "Railway Economy" Age 119
World-class Popular Travel Route Opened 129

章节摘录

插图：care and construction site culture to ensure spirituallife. Many units set up "employee homes" with Ka-raoke, musical instruments, chess and playing cards, billiards and pingpong tables. They installed satel-lite TV and a library; some units installed program-controlled telephones to enable employees to contacttheir families; some units set up recuperation basesin Golmud so employees on the mountains couldrefresh themselves; some units carried out colorfulactivities such as site photo exhibitions, article con-tests and Karaoke. This cultural life at the spare timecontributed to dispel the loneliness of the workers. All these stimulated high spirits among workers."The plateau may lack oxygen, but we never lackmorale. The environment is terrible and the wind isstrong, but our willingness is stronger. The plateauis high, but our will to fight is higher." The workersoften said such words to encourage each other. Thiswas the spirit of the Qinghai-Tibet Railway.
