内容概要

As a branch of sociology , development studies itself is both interdisciplinary and multidisciplinary , mainly focusing on issues related to developing countries. Its emergence in the second half of the 20th century is in a large part due to increasing concern about economic prospect for the third world after decolonization. Immediately after World War II , development economics , a branch of economics , arose out of previous studies. By 1960s , an increasing number of development economists realized that economics alone is inadequate in meeting challenging issues such as political effectiveness and provision of education. Development studies appeared as a result of this , initially aiming at exploring the inter-relationship between economics and politics.

The teachers and students in College of Humanities and Development Studies (COHD) of China Agricultural University (CAU) have long been involved in the activities of teaching , research and practice related to development studies. During this process , they have accumulated huge amount of valuable experience and expertise. This textbook has selected the most common 10 topics of this field. We hope the compilation of this book may assist undergraduate students from both linguistic and professional dimensions.

作者简介

Ms. Yang Fang , Lecturer of College of Humanities and Development Studies , China Agricultural University. From 1996 to 1997 , she studied in Asian Institute of Technology (Thailand) and obtained her Master Degree on Gender and Development and Regional Rural Planning.

Ms. Yang has been teaching English for Sociology and Development Studies to undergraduate students since 1998 and partly involved in teaching to graduate students.

Mr. Li Fan , Lecturer of College of Humanities and Development Studies , China Agricultural University. He obtained MBA from the Royal Institute of Communication and Tourism (the Netherlands) in 1997. He has rich experiences on rural development practices and close collaborations with many multilateral and bilateral organizations on development issues in China.

Foreword	
Chapter 1	Understanding Development
Chapter 2	Project and Management
Chapter 3	Participatory Project Process
Chapter 4	Participatory Development Planning
Chapter 5	Guideline for Writing a Proposal
Chapter 6	Participatory Monitoring and Evaluation
Chapter 7	Participatory Rural Appraisal
Chapter 8	Participatory Geographic Information System
Chapter 9	Training for Development
Chapter 10	Capacity Building
Annex	
Key Terms	
Questions for Discussion	
Reference	

章节摘录

版权页：插图： According to Hasna, sustainability is a process which tells of a development of all aspects of human life affecting sustenance. It means resolving the conflict between the various competing goals, and involves the simultaneous pursuit of economic prosperity, environmental quality and social equity famously known as three dimensions, hence it is a continually evolving process; the "journey" (the process of achieving sustainability) is of course vitally important, but only as a means of getting to the destination (the desired future state) . However, the "destination" of sustainability is not a fixed place in the normal sense that we understand of destination. Instead, it is a set of wishful characteristics of a future system. Green development is generally differentiated from sustainable development in that Green development prioritizes what its proponents consider to be environmental sustainability over economic and cultural considerations. Proponents of Sustainable Development argue that it provides a context in which to improve overall sustainability where cutting edge Green development is unattainable. For example, a cutting edge treatment plant with extremely high maintenance costs may not be sustainable in regions with fewer financial resources. An environmentally ideal plant that is shut down due to bankruptcy is obviously less sustainable than one that is maintainable by the community, even if it is somewhat less effective from an environmental standpoint. Some research activities start from this definition to argue that the environment is a combination of nature and culture. The Network of Excellence "Sustainable Development in a Diverse World", sponsored by the European Union, integrates multidisciplinary capacities and interprets cultural diversity as a key element of a new strategy for sustainable development.
