

<<分圆域>>

图书基本信息

书名：<<分圆域>>

13位ISBN编号：9787510004773

10位ISBN编号：7510004772

出版时间：2009-6

出版时间：世界图书出版公司

作者：朗

页数：432

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

前言

Kummer's work on cyclotomic fields paved the way for the development of algebraic number theory in general by Dedekind, Weber, Hensel, Hilbert, Takagi, Artin and others. However, the success of this general theory hastended to obscure special facts proved by Kummer about cyclotomic fields which lie deeper than the general theory. For a long period in the 20th century this aspect of Kummer's work seems to have been largely forgotten, except for a few papers, among which are those by Pollaczek [Po], Artin-Hasse [A-H] and Vandiver. In the mid 1950's, the theory of cyclotomic fields was taken up again by Iwasawa and Leopoldt. Iwasawa viewed cyclotomic fields as being analogues for number fields of the constant field extensions of algebraic geometry, and wrote a great sequence of papers investigating towers of cyclotomic fields, and more generally, Galois extensions of number fields whose Galois group is isomorphic to the additive group of p -adic integers. Leopoldt concentrated on a fixed cyclotomic field, and established various p -adic analogues of the classical complex analytic class number formulas. In particular, this led him to introduce, with Kubota, p -adic analogues of the complex L -functions attached to cyclotomic extensions of the rationals. Finally, in the late 1960's, Iwasawa [Iw 11] made the fundamental discovery that there was a close connection between his work on towers of cyclotomic fields and these p -adic L -functions of Leopoldt-Kubota. The classical results of Kummer, Stickelberger, and the Iwasawa-Leopoldt theories have been complemented by, and received new significance from the following directions:

书籍目录

Notation Introduction CHAPTER 1 Character Sums 1.Character Sums over Finite Fields 2.Stickelberger's Theorem 3.Relations in the Ideal Classes 4.Jacobi Sums as Hecke Characters 5.Gauss Sums over Extension Fields 6.Application to the Fermat Curve CHAPTER 2 Stickelberger Ideals and Bernoulli Distribution 1.The Index of the First Stickelberger Ideal 2.Bernoulli Numbers 3.Integral Stickelberger Ideals 4.General Comments on Indices 5.The Index for k Even 6.The Index for k Odd 7.Twistings and Stickelberger Ideals 8.Stickelberger Elements as Distributions 9.Universal Distributions 10. The Davenport-Hasse Distribution Appendix. Distributions CHAPTER 3 Complex Analytic Class Number Formulas 1.Gauss Sums on $\mathbb{Z}/r\mathbb{Z}$ 2.Primitive L-series 3.Decomposition of L-series 4.The $(+1)$ -eigenspaces 5.Cyclotomic Units 6.The Dedekind Determinant 7.Bounds for Class Numbers CHAPTER 4 The p -adic L-function CHAPTER 5 Iwasawa Theory and Ideal Class Groups CHAPTER 6 Kummer Theory over Cyclotomic Extensions CHAPTER 7 Iwasawa Theory of Local Units.....
